CampusNexus® Student

Portal

Version 18.2.0 (and later)

Administrator Reference

January 2021

Anthology Inc.

Revision History

Rev.	Date	Description
01	Jul. 2017	Initial publication for Portal 18.2.0 (and later)
02	Oct. 2017	Added content: • Replace STS with Custom STS • External Application Integration • External Vendor Requirements
03	Apr. 2018	Added content (Version 19.0): • PCI Compliance • Occupation Insight Pages • Custom HTML Pages • Student STS Images Folder • Branding for Multiple URLs • Azure Active Directory
04	Sep. 2018	Added content (Version 19.0.3).
05		Updated content (Version 19.0.4).
06	Feb. 2019	Updated/added content (Version 20.0): • Updated URL for Bootstrap themes to https://bootswatch.com/3/ (see Bootstrap Themes). • Power BI Reports Integration • Migration of Crystal Reports to SSRS
07	Oct. 2019	Updated/added content (Version 21.0): • Added Mobile Version of Power BI/Occupation Insight Reports. • Added steps to configure a Student Active Directory User in the Portal Admin Console. • Portal Branding When your Portal is hosted in a CampusNexus Cloud environment, your Portal administrator does not have access to upload branding files and cannot reset IIS either. Please contact Anthology Inc. Support (1-800-483-9106) to accomplish the tasks related to updating branding files or resource files for internationalization. • Custom HTML Pages: When Portal is deployed in CampusNexus Cloud, a Support ticket must be opened to place resource files in appropriate server locations.
08	Sep. 2020	Updated/added content (Version 21.2): • Added TouchNet to the list of payment gateways. See Make Payment Online. • Added Parameter Based Redirection.
09	Jan. 2021	New Custom Classes, CSS, and JS Added in Version 21.3 (see Appendix).

📄 [Portal Administrator Help](#) (includes Applicant, Employer, Faculty, and Student Portal Help with annotations for administrators)

For feedback related to the Portal help content, send email to documentation@campusmgmt.com.

For issues related to the Portal application, use the Feedback link at the bottom right of the Portal window to notify the administrator at your institution.
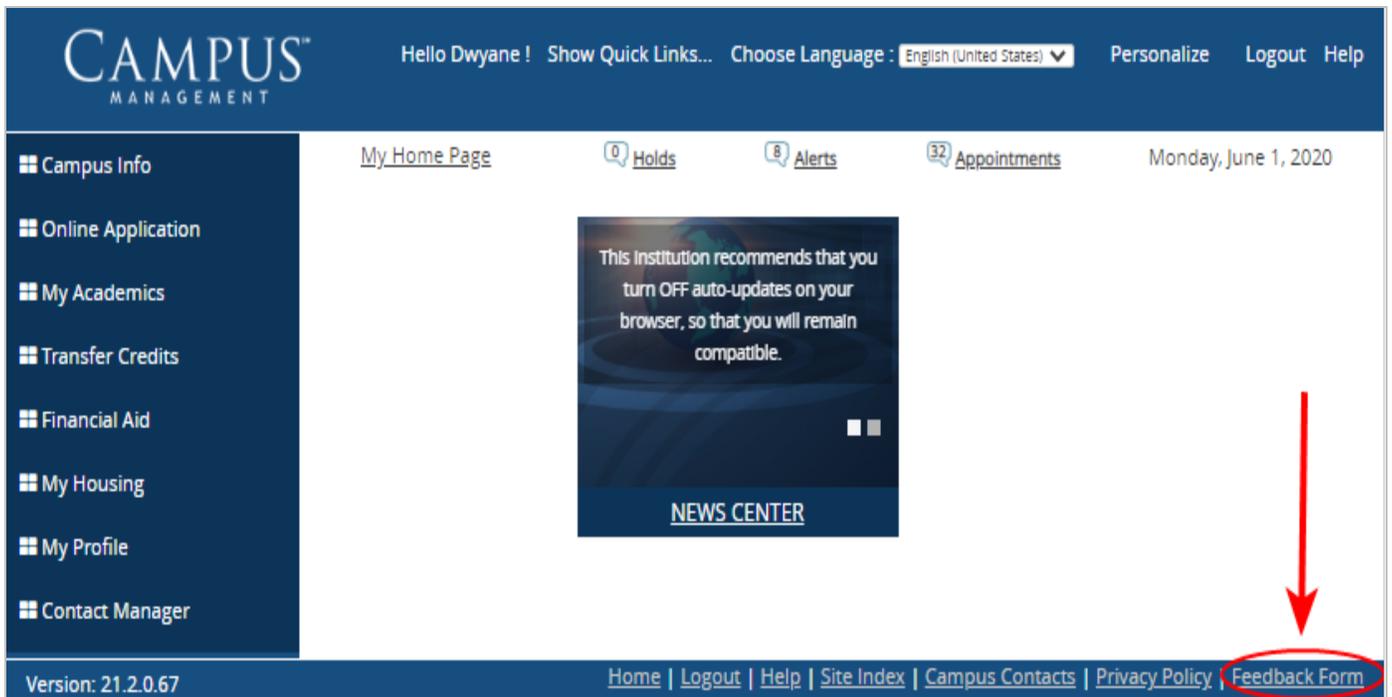

The Portal available with CampusNexus Student version 18.2 and later provides the following new features and enhancements:

- **Internationalization**

  Institutions can configure Portal to support multiple languages and end users can select their language preference.

Users can select their language preferences and institutions can apply resource files to provide support for multiple languages. Portal supports multiple language options, including English (United States), Hindi (India), Arabic (Kuweit), Bahasa (Indonesia), and Chinese (Simplified).

- **Responsive Design**

  The design of the Portal web pages is optimized to display properly on all devices (desktops, tablets, and mobile phones).

- **Themes**

  Institutions can apply *Bootstrap* and *Kendo* themes and templates to change the styling of the Portal web pages.

  Bootstrap and Kendo are popular open source front-end development frameworks providing reusable pieces of code written in HTML, CSS, and JavaScript. Themes are collections of components that determine the layout and design of web sites built on top of Boostrap and Kendo.

- **Page-specific enhancements**

  Many of the Portal web pages provide enhancements to the user interface, such as grid pagination, sorting, and search.

- **Design Changes for Web Parts**

  The web parts have been redesigned to enhance usability on all devices. Web parts such as Class Center and News Center use carousel views instead of lists or grids. Other web parts provide links for detailed information instead of listing information directly in the web part.

Note: Be advised that when navigating this document, you will see references to the Portal Configuration tool which have not yet been updated.

The following topics provide reference information and procedures related to the installation, customization, and branding of the Portal.

Note: Be advised that when navigating this document, you will see references to the Portal Configuration tool which have not yet been updated.

Portal Installation

The new Portal capability being delivered as part of CampusNexus Student version 18.2.0 (and later) is installed using Installation Manager.

Since Portal supports claims-based authentication, the Staff STS and Student STS components need to be installed with the Portal.

- The Staff STS provides authentication and single sign-on for staff using the Portal and CampusNexus Student.

- The Student STS provides authentication for applicants, students, and employers.

For prerequisites and detailed instructions, please refer to Installation Manager Help.

Authentication and Single Sign-On

The Portal being delivered as part of CampusNexus Student version 18.2.0 (and later) supports two methods for authentication and single sign-on (SSO).

A. The current method of configuring security in the Portal Config tool by calling the CMCSecurityService API and passing the GUID back.

The current authentication process involves the Portal database. Passwords are stored in the wpuser table and are decrypted in the SyStaff table to retrieve a valid token for interacting with the APIs from the Staff Portal.

B. The new method of claims-based authentication using the custom Security Token Services (STS).

The custom STS built by Anthology Inc. has SSO functionality built-in. The SSO functionality allows any web application relying upon the same STS to have SSO between them. These web applications can be Anthology Inc.'s web applications such as CampusNexus Student and Portal, or custom web applications developed by Integration Services or clients.

Portal authentication relies on the Staff STS (common for all CampusNexus products) and Student STS. The Staff STS and Student STS eliminate the need to decrypt the stored password in the SyStaff table. Both Student and Staff STS support the Active Directory (AD) and Database (DB) mode.

Staff STS is used for authentication in:

- Staff Portal
- Admin Console
- Portal Configuration Tool

The Staff account is created in Portal based upon staff group association.

Student STS is used for authentication in:

- Student Portal
- Employer Portal
- Applicant Portal

What is Security Token Service (STS)?

Security token service is the service component that builds, signs, and issues security tokens according to the WS-Trust and WS-Federation protocols. It is possible to use a cloud STS such as a LiveID STS, a pre-built STS such as Active Directory® Federation Services (AD FS) 2.0, or if you want to issue custom tokens or provide custom authentication or authorization, you can build your own custom STS using Windows Identity Foundation (WIF).

There are three main components in a typical federated authentication scenario. The following diagram shows the relation between them:
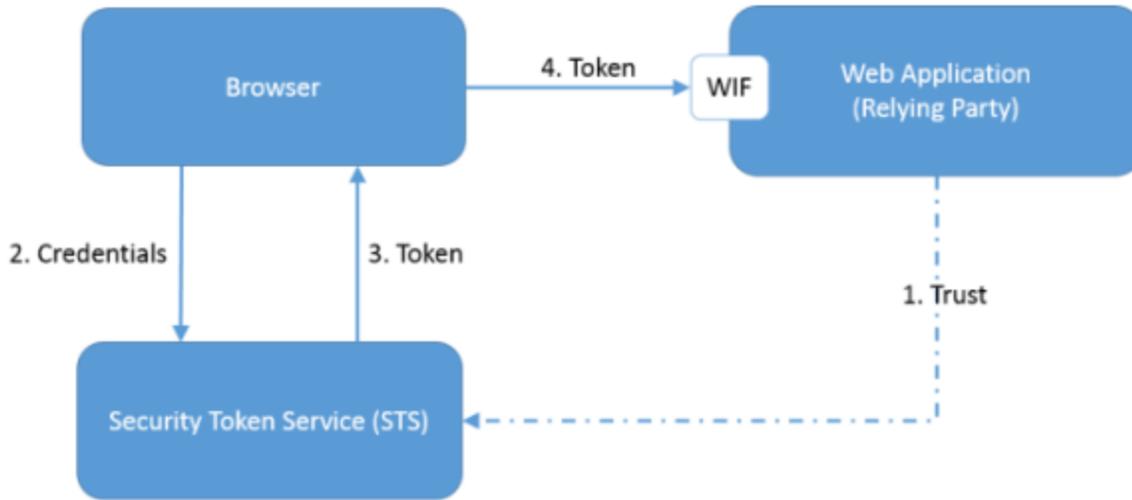

1. The Web Application is a claims-aware Web Application with trust established on the STS. This Web Application will use WIF to identify and route unauthenticated requests to STS.

2. The end user provides credentials to STS and STS authenticates the user.

3. Upon successful authentication, STS generates a token for the user.

4. The user is redirected to the claims-aware Web Application with a token. The Web Application uses WIF to validate and parse the token.

Beginning with .NET 4.5, Windows Identity Foundation (WIF) has been fully integrated into the .NET Framework. Having the WIF classes directly available in the framework itself allows a much deeper integration of claims-based identity in the .NET platform, making it easier to use claims.

The following section and reference links describe how to make your application work with STS (i.e., claims-aware) and how to build a new claims-aware application.

Configure ASP.NET MVC for Claims-Based Authentication

In the six steps below, you will add configuration entries to the Web.config file of your ASP.NET MVC web application to make it claims-aware. The same Web.config changes can be applied to other types of .Net Web Applications as well.

1. Add the following configuration section definitions to the Web.config configuration file. These define configuration sections required by WIF. Add the definitions immediately after the <configuration> opening element:

   <configSections>

```xml
  <section name="system.identityModel" type-
e="System.IdentityModel.Configuration.SystemIdentityModelSection, System.IdentityModel, Ver-
sion=4.0.0.0, Culture=neutral, PublicKeyToken=B77A5C561934E089" />

  <section name="system.identityModel.services" type-
e="System.IdentityModel.Services.Configuration.SystemIdentityModelServicesSection, Sys-
tem.IdentityModel.Services, Version=4.0.0.0, Culture=neutral, PublicKeyToken=B77A5C561934E089" />

</configSections>
```

2. Add a <location> element that enables access to the application's federation metadata:

```xml
<location path="FederationMetadata">

 <system.web>

 <authorization>

 <allow users="*" />

 </authorization>

 </system.web>

</location>
```

3. Add the following configuration entries within the <system.web> elements to deny users, disable native authentication, and enable WIF to manage authentication:

```xml
<authorization>

 <deny users="?" />

</authorization>

<authentication mode="None" />
```

4. Add the following WIF related configuration entries and ensure that your ASP.NET application's URL and port number match the values in the <audienceUris> entry, realm attribute of the <wsFederation> element, and the reply attribute of the <wsFederation> element. Also, ensure that the issuer value fits your STS URL.

```xml
<system.identityModel>

 <identityConfiguration>

 <audienceUris>

 <add value="http://localhost:9090/" />

 </audienceUris>
```

```
<issuerNameRegistry type="System.IdentityModel.Tokens.ConfigurationBasedIssuerNameRegistry, Sys-
tem.IdentityModel, Version=4.0.0.0, Culture=neutral, PublicKeyToken=b77a5c561934e089">

<trustedIssuers>

<add thumbprint="1234567890ABCDEFGHIJKLMNOPQRSTUVWXYZ1234" name="YourSTSName" />

</trustedIssuers>

</issuerNameRegistry>

<certificateValidation certificateValidationMode="None" />

</identityConfiguration>

</system.identityModel>

<system.identityModel.services>

<federationConfiguration>

<cookieHandler requireSsl="false" />

<wsFederation passiveRedirectEnabled="true" issuer="http://SignIn.MyUrl.edu/" realm-
m="http://localhost:9090/" reply="http://localhost:28503/" requireHttps="false" />

</federationConfiguration>

</system.identityModel.services>
```

5. Add a reference to the [System.IdentityModel] assembly (Version: 4.0.0.0).

6. Compile the solution to make sure there are no errors.

Integrate Application Specific Logic or Claim

Once you receive a valid token from STS, you may want to do some additional authorization or populate other application-specific claims. There are many events available for supplementing application-specific logic. The following two events can be used to add an application-specific claim or do any particular cleanup when signing out.

```
protected void WSFederationAuthenticationModule_SessionSecurityTokenCreated(Object sender,

SessionSecurityTokenCreatedEventArgs e)

{

// TODO: Tap into Token Created event to do application specific logic

// This event will be called after login

var claimsIdentity = (ClaimsIdentity) e.SessionToken.ClaimsPrincipal.Identity;

SetAppClaims(claimsIdentity);
```

```
}
```

/// <summary>

/// TODO: Any custom logic that has to happen upon signout

/// This event will be called even if the sign out is being done from other RP applications

/// </summary>

/// <param name="sender"></param>

/// <param name="e"></param>

protected void WSFederationAuthenticationModule_SigningOut(object sender, SigningOutEventArgs e)

```
{
}
```

Portal Branding

The following topics describe the procedures institutions can use to change the default behavior of the Portal 18.2.0 (or later) as it relates to:

- Home Page Layout
- Branding
- Style sheets
- Themes
- Internationalization

The branding procedures apply to all web pages in Portal including the log on and authentication pages in Student STS.

> When your Portal is hosted in a CampusNexus Cloud environment, your Portal administrator does not have access to upload branding files and cannot reset IIS either. Please contact Anthology Inc. Support (1-800-483-9106) to accomplish the tasks related to updating branding files or resource files for internationalization.

Home Page Layout

With the addition of tiles-based web parts, the following modifications can be made to the Home Page Layout Manager in the Portal Configuration tool.

Column Settings

Based on the selection of columns, we can define the size of each zone. The sum of all the zones must not exceed 12. This condition is validated in the Portal Configuration tool when you click the **Update Home Page Layout** button.

CAMPUS Portal Configuration

- Campus Portal
  - btpcmi031;localhost;cltdep171test8:83;btpcmi
    - Campus Management School of Arts
    - CMC Online
    - CBIT - Branch School
    - CM School of Artifical WIngsaaaaaaa
    - American Broadcasting Corporation of IEEE
    - North South East West Campus
    - Kris Campus for Testing
    - 26911
    - werwerwerwer
    - new campus
    - newcampus
    - SKG Culinary School
    - NOCAMPUS
    - North Campus - Catalog Year

☑ Display bottom zone on home pages across all columns

Update Home Page Layout

Carousel Settings

Some web parts have extensive content which is displayed in the form of a carousel. The carousel is time based.

You can set the carousel in the Admin console under **Site Settings**. Search for
"CAROUSELTIMEINTERVALFORWEBPARTS".

- The time interval can be set in milliseconds (e.g., 10000 for 10 seconds).
- To turn it off, set it to false.

Portal Graphics

> When your Portal is hosted in a CampusNexus Cloud environment, your Portal administrator does not have access to upload branding files and cannot reset IIS either. Please contact Anthology Inc. Support (1-800-483-9106) to accomplish the tasks related to updating branding files or resource files for internationalization.

Icons

The new Portal uses standard Font-Awesome icons, a standard representation of data which will make your Portal presentation more consistent and modern. **Do not** change these icons.

Graphic Elements

Follow these steps to begin branding the Portal by updating the graphic elements. Review the Graphic Element Constraints before you begin.

1. Open the Portal folders on the server: **CMCPortal\Public\global\images**

2. You will be saving your changes by overwriting the files in the global\images folders. As a precaution, first save the global folder as **globalbackup**. You can reinstate the original global folder at any time should you need to.

3. Copy and paste your new graphics into the appropriate folders in **CMCPortal\Public\global\images**, replacing the default graphic elements.

Graphic Element Constraints

Portal is designed to enable you to easily update graphic elements. Think of the default Portal as a template, and follow these rules when updating graphic elements:

- Use the same file name as the graphic being replaced.

- Render the graphic in the appropriate format.

- Keep the graphic within the size specifications. Refer to the table CMCPortal\Public\global\images for exact sizes in pixels.

- Most icons must be kept within the 15 x 15 pixel range.

- **Do not** update images in the **CMCPortal\Images** folder.

- You can update the images in the **CMCPortal\Public\global\images** folder. This folder contains three sub-folders:

    - **Apply**: This folder holds images for the Applicant Portal.

    - **Icons**: This folder holds icons for multiple Portal types.

    - **Reg**: This folder holds graphic elements for the online registration feature.

Graphic Element Folders

CampusPortal Images Folder

The **CMCPortal\\images** folder is used to store default Portal graphic elements that are tied to programming controls. **Do not** update them.

Global Images Folder

The **CMCPortal\Public\global\images** folder is used to store default Portal graphic elements that may be updated to create the institution's brand or theme. It is recommended that you copy this global folder, rename it to **globalbackup** and then save your updated graphic elements in the appropriate sub folder in the CMCPortal\Public\global\images folder.
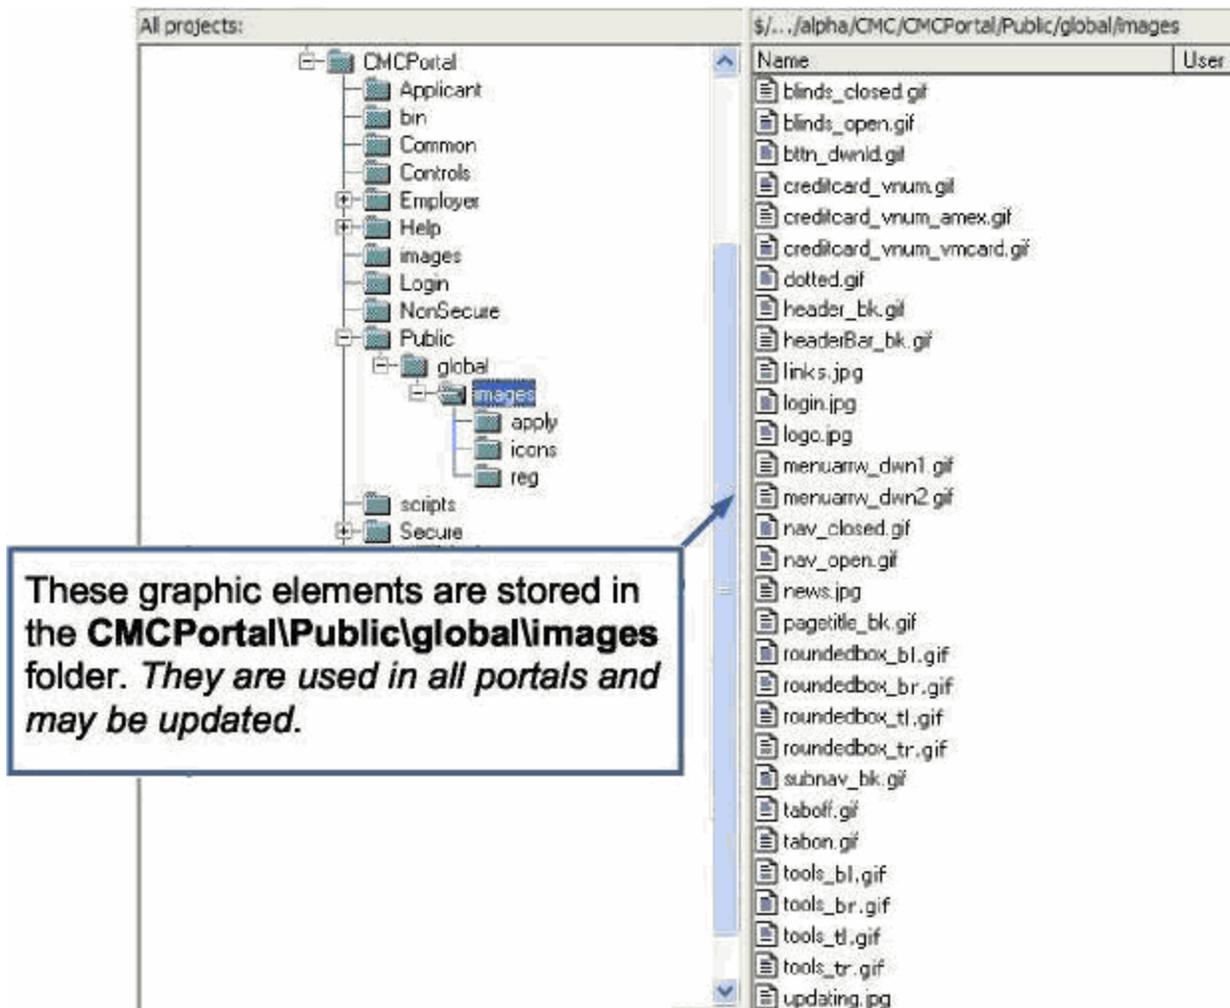

Student STS Images Folder

The **CMCStudentSTS\Public\Images** folder is used to update the Student Portal login page. All of the steps in this document to add images apply to the Stundent STS images; just the location of the images are different for the Student Portal login page.

The following table defines graphic elements in the **CMCPortal\Public\global\images** folders.

- The *Image* column shows the actual graphic.
- The *Name* columns shows the file name associated with the graphic
- The *Tooltip* column shows the text that is displayed when the cursor hovers over the graphic.
- The *Pixels* column shows the size to which the graphic must be kept.
- The *Description* column indicates the use of the graphic.
- The *Class* column shows the class applied to the image in the style sheet.

CMCPortal\Public\global\images

Image	Name	Tooltip	Pixels	Description	Class
	Logo.png	empty	216x60	Transparent image. The color of the image is white. If you want to use a light background for the header, use another logo having color blue or any other color.	navbar-brand1, img-responsive
	Img1.jpg	empty	198x152	Minimum width should be 198x152 This is used for branding.	Img-responsive
	Img2.jpg	empty	198x152	Minimum width should be 198x152 This is used for branding.	Img-responsive
	Img3.jpg	Empty	198x152	Minimum width should be 198x152 This is used for branding.	Img-responsive
	Img4.jpg	Empty	198x152	Minimum width should be 198x152 This is used for branding.	Img-responsive
	Icon1.png	Empty	68x68	Transparent image The color of the icon will change according to the background color of the header.	tab_icon, navbar-default

Image	Name	Tooltip	Pixels	Description	Class
	Icon2.png	Empty	68x68	Transparent image The color of the icon will change according to the background color of the header.	tab_icon, navbar-default
	Icon3.png	Empty	68x68	Transparent image The color of the icon will change according to the background color of the header.	tab_icon, navbar-default
	Icon4.png	Empty	68x68	Transparent image The color of the icon will change according to the background color of the header.	tab_icon, navbar-default
	login_img1.jpg	Branding Image	523x423	Minimum width should be 523x423 This is used for branding.	img-respons-ive, login_img
	News.jpg	Empty	High res-olution image	This is used for web part background.	
	Advisor.jpg	Empty	High res-olution image	This is used for web part background.	
	Stories.jpg	Empty	High res-olution image	This is used for web part background.	

Portal Style Sheets

You can brand the default CampusPortal™ theme by updating the style sheets. CampusPortal's flexibility enables you to change the text properties to harmonize with your institution's conventions to create your brand or theme.

> When your Portal is hosted in a CampusNexus Cloud environment, your Portal administrator does not have access to upload branding files and cannot reset IIS either. Please contact Anthology Inc. Support (1-800-483-9106) to accomplish the tasks related to updating branding files or resource files for internationalization.

Update the default Portal style sheet

1. Using a text editor such as Microsoft™ WordPad or Notepad™, open the portal style sheet **bootstrap.css** from the following folder:

   CMCPortal\Public\global\css.

2. Save changes by overwriting the bootstrap.css file. As a precaution, first save the bootstrap.css as **originalbootstrap.css**. You can reinstate the original style sheet at any time should you need to.

Notes:

- The following style sheets are examples of changes to text color, link color, and page header color. Changes for colors only are mainly done in the **bootstrap.css**.

- Any font-size, font type, and layout related changes that have to be common across all new themes must be placed in the **main.css**.

Examples

```
.navbar-default .navbar-text
{
color: #fff !important;
}

a
{
color: #3e3e3e;
}

.navbar-default
{
background-color: #174e80;
border-color: #e7e7e7;
}
```

Note:Any addition of custom classes must be kept above the Media Queries comment tag.

```
/****************MEDIA QUERIES****************/
```

Example

The following code changes the font-size of web part content. The custom class used is wp_txt.

```
.wp_txt {
font-size: 12px;
color: #ffffff;// defined to keep the color same across all the themes
}
```

Left menu padding is mandatory in the main.css.

To assign a default color, add the same class in the bootstrap.css. If you place the color attribute in the main.css, it will remain the same for all themes.

main.css

```
.left_menu {
padding: 10px !important;
background-color: rgba(0, 0, 0, 0.31);
}
```

bootstrap.css

```
.left_menu
{
background-color: rgb(12, 52, 88) !important;
}
```

Update the custom classes for Bootstrap

A few custom classes are used to override some of the Bootstrap classes. The custom classes are added in a separate css file named bootstrap_custom.css.

If the Bootstrap theme is changed, the custom classes will have to be changed to have the similar look and feel.

The impacted areas are highlighted for each of the classes. For more details, see Custom Classes for the Default Scheme.

Add a reference to the bootstrap_custom.css

1. On the App server, browse to the folder **CMCPortal\Public\global\css**.

2. Open **boostrap.css** in edit mode, add the following line at the top, and save the file.

```
@import url('bootstrap_custom.css');
```

```
 1  /*!
 2   * Bootstrap v3.3.7 (http://getbootstrap.com)
 3   * Copyright 2011-2016 Twitter, Inc.
 4   * Licensed under MIT (https://github.com/twbs/bootstrap/blob/master/LICENSE)
 5   */
 6  /*! normalize.css v3.0.3 | MIT License | github.com/necolas/normalize.css */
 7  @import url('bootstrap_custom.css');
 8  html {
 9      font-family: sans-serif;
10      -webkit-text-size-adjust: 100%;
11          -ms-text-size-adjust: 100%;
12  }
13  body {
14      margin: 0;
15  }
16  article,
17  aside,
18  details,
19  figcaption,
20  figure,
21  footer,
22  header,
23  hgroup,
24  main,
25  menu,
26  nav,
27  section,
28  summary {
29      display: block;
30  }
```

Update the default Portal Right to Left style sheet

Ready-made themes are not available online for right to left alignment based languages like Arabic.

Note: For any custom classes added in bootstrap.css (classes with color attribute only) or main.css (classes with text-align:left and float:left, change the text alignment to :right) and add the same class to the bootstrap-arabic.css.

Example

bootstrap.css

```
.Quick_link {
color: #ffffff;
}
```

bootstrap-arabic.css

```
.Quick_link {
color: #ffffff;
}
```

main.css

```
.left
{
text-align:left;
}
```

bootstrap-arabic.css

```
.left
{
text-align:right!important;
}
```

All alignments should change from left to right. Decorate alignment with the **!important** attribute.

Bootstrap Themes

Bootstrap themes can be applied to Portal pages and Student STS pages.

> When your Portal is hosted in a CampusNexus Cloud environment, your Portal administrator does not have access to upload branding files and cannot reset IIS either. Please contact Anthology Inc. Support (1-800-483-9106) to accomplish the tasks related to updating branding files or resource files for internationalization.

Apply a Theme to Portal Pages

To change the Bootstrap theme applied to the Portal web pages, perform the following steps.

1. Go to https://bootswatch.com/3/ and click on the **Themes** drop-down.

   Note: The themes available at https://bootswatch.com/ are not compatible with Portal. You must use the themes for Bootstrap version 3 at https://bootswatch.com/3/.
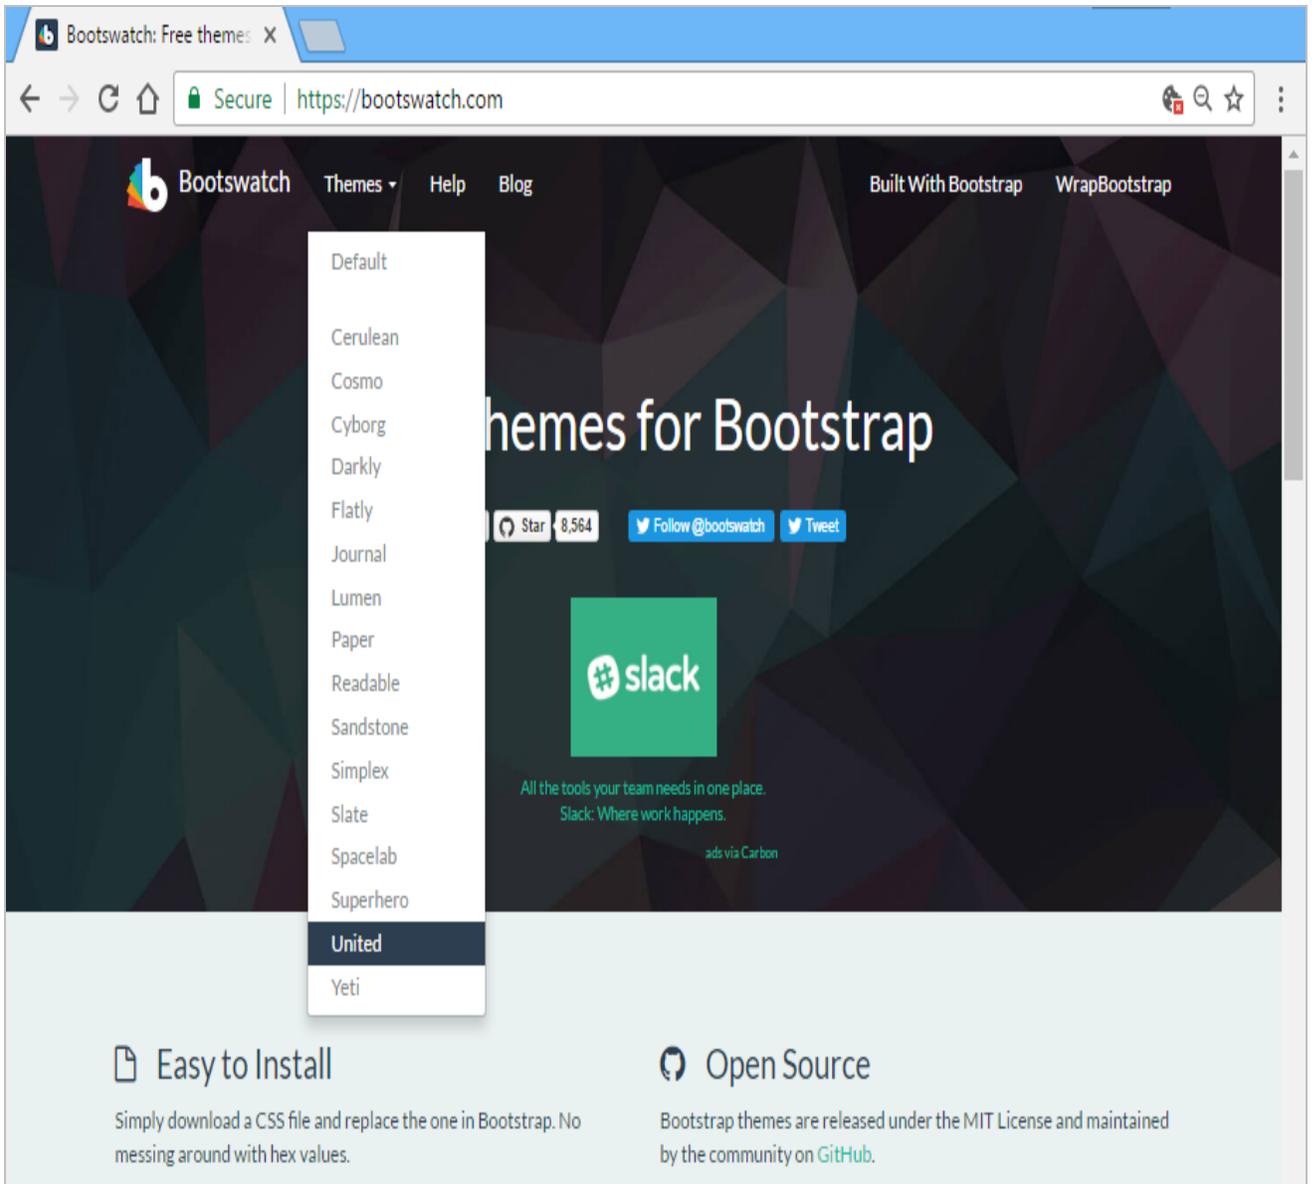

2. In this example, we are selecting the **United** theme.

3. Click on the **United** drop-down and select **bootstrap.css**.
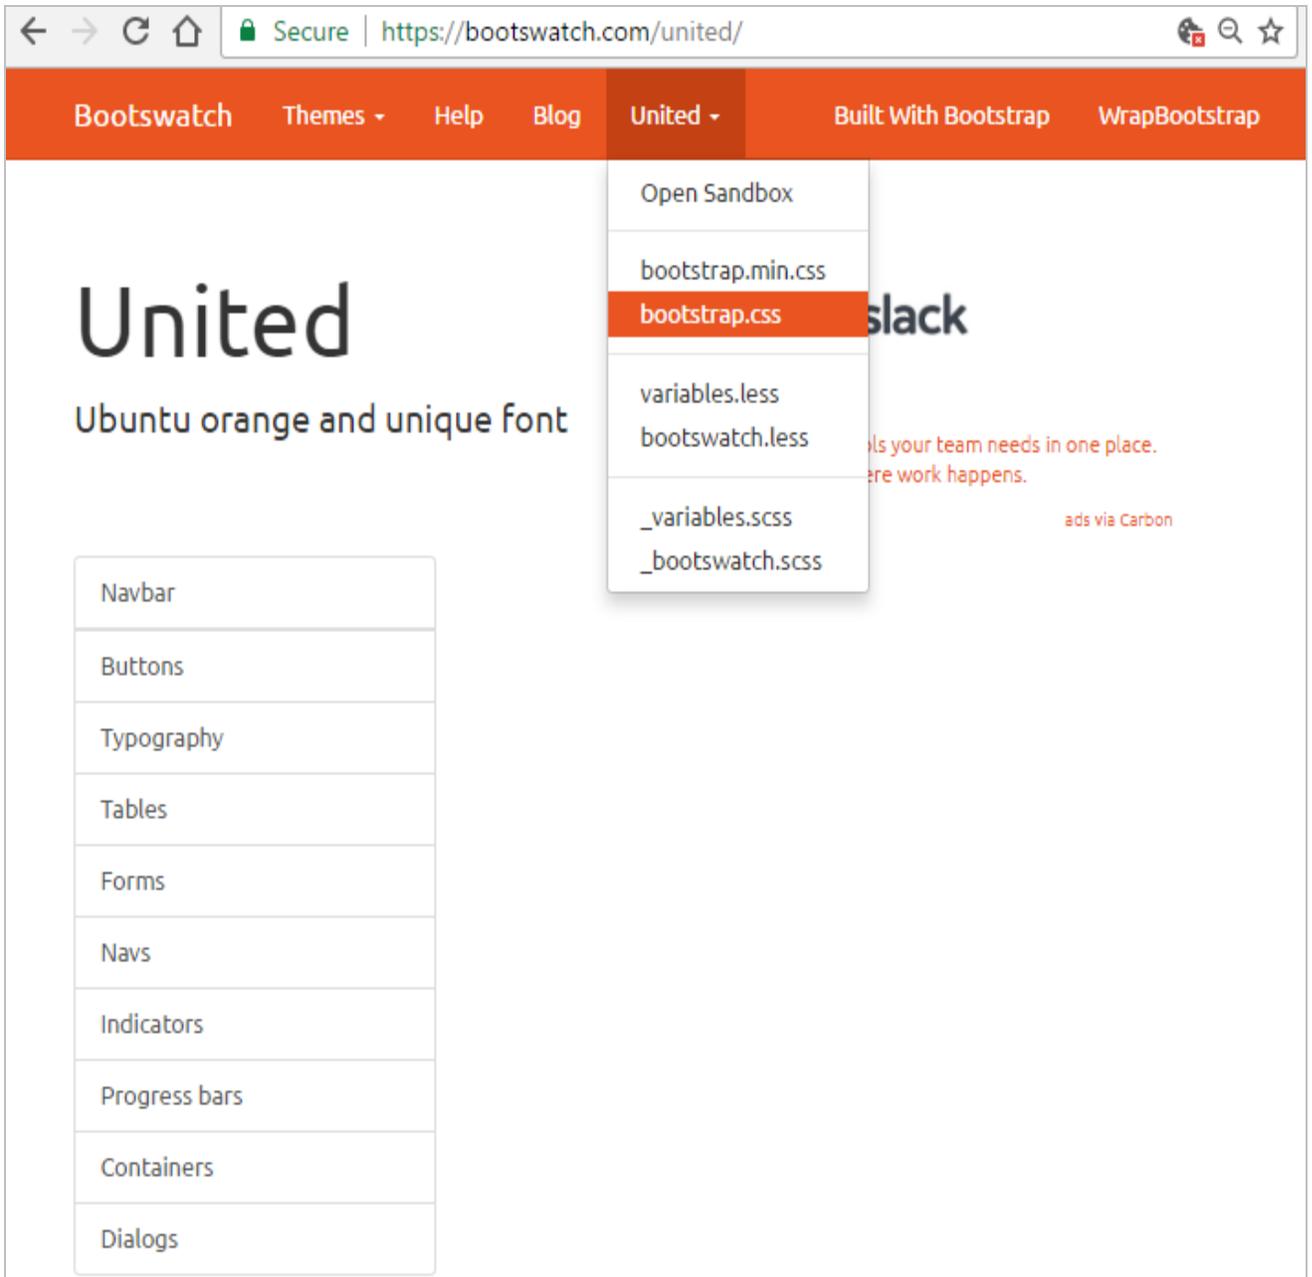

4. Once you click on boostrap.css, you will see the CSS Code. Right-click and select **Save as**. Keep the file name and file type Cascading Style Sheet Document (.css).
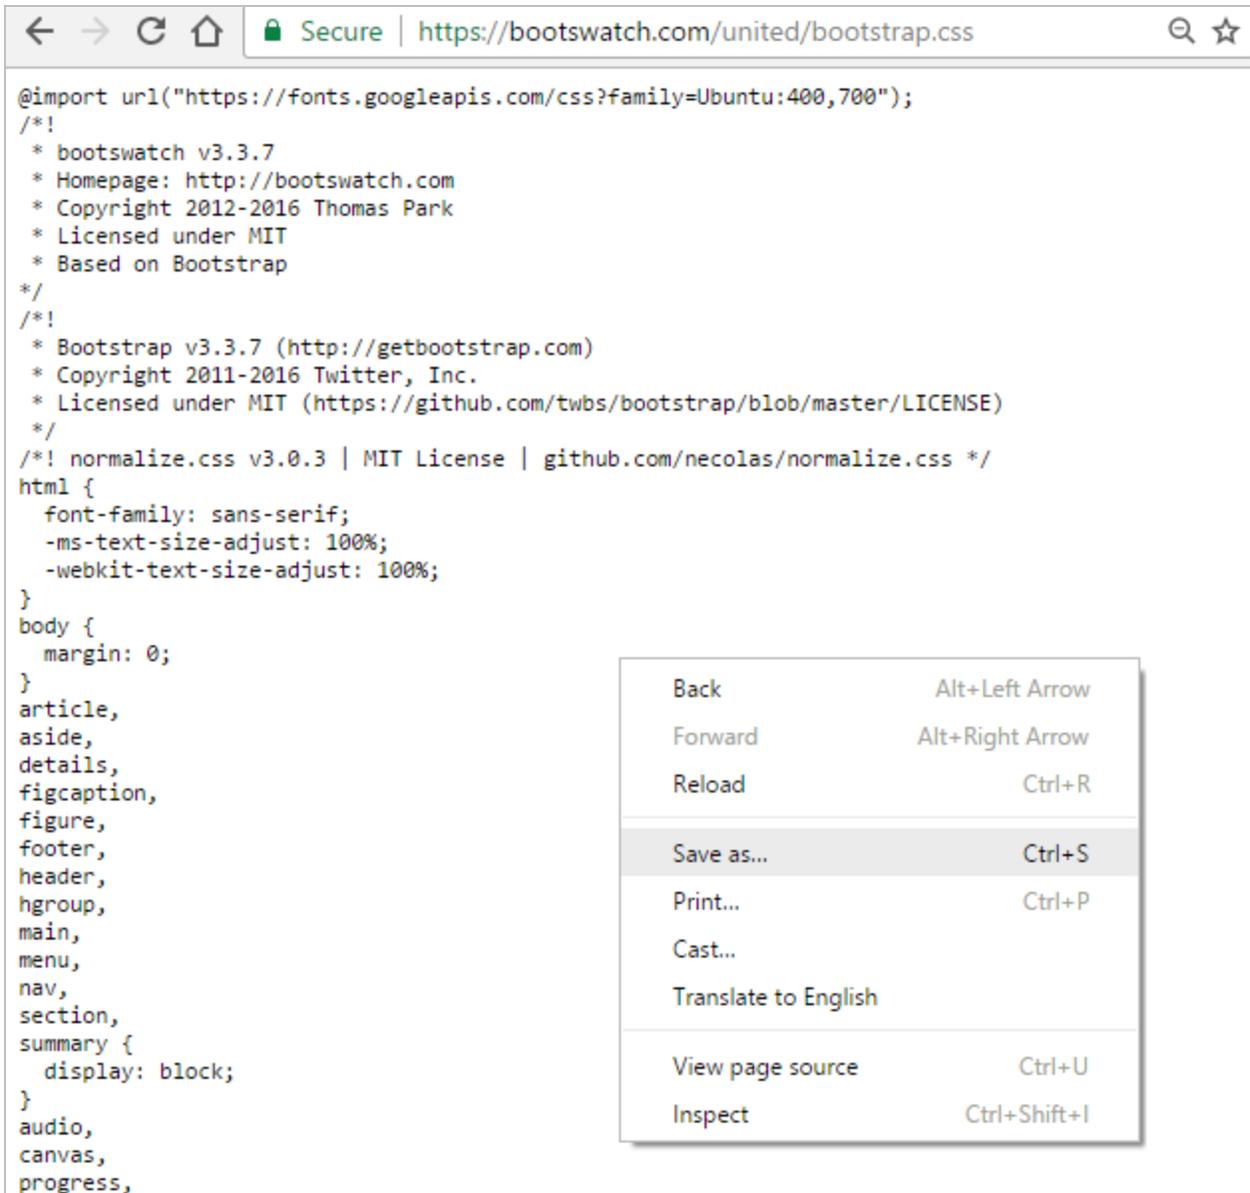

5. Open a **Remote Desktop Connection** and log in to the server that hosts your Portal.

6. Open **Internet Information Services (IIS) Manager** on the server and locate the hosted application **CMCPortal**.
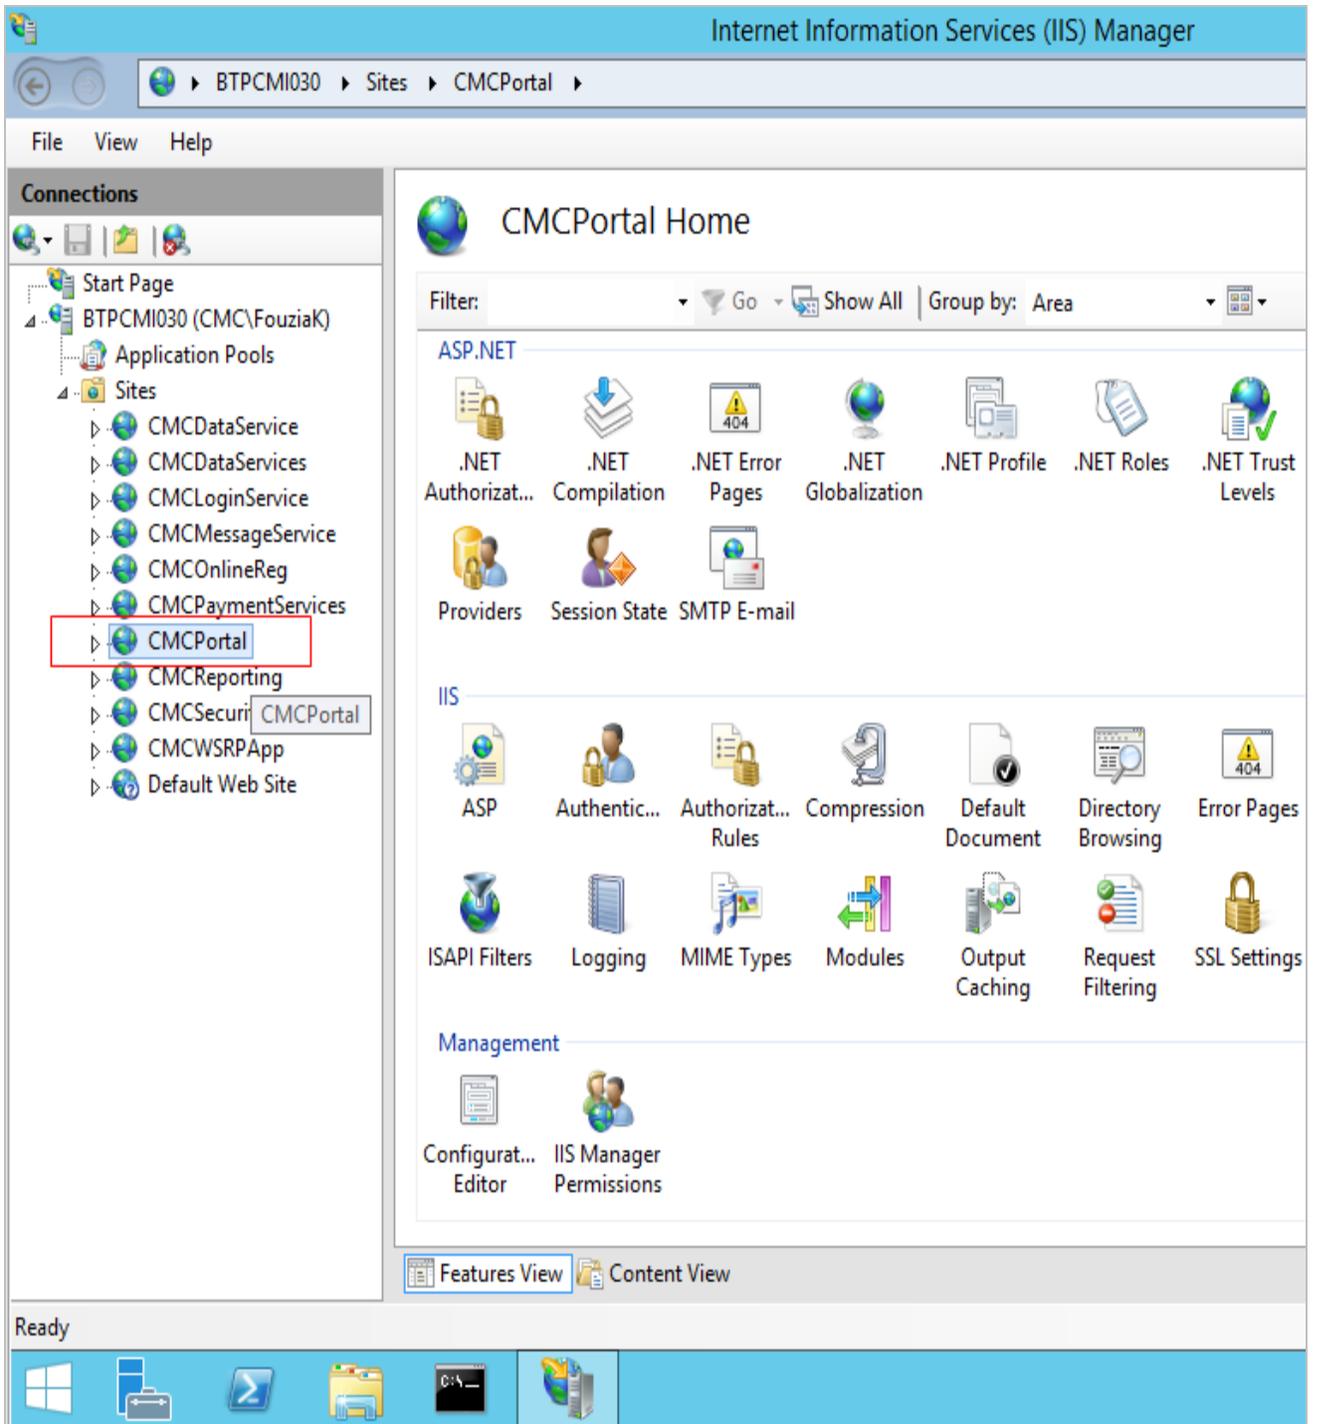

7. Right-click on **CMCPortal** and select **Explore**.

8. Navigate to the **Public\global\css** folder. You will see the bootstrap.css file in the global folder.

9. Right-click the existing **bootstrap.css** and rename it.
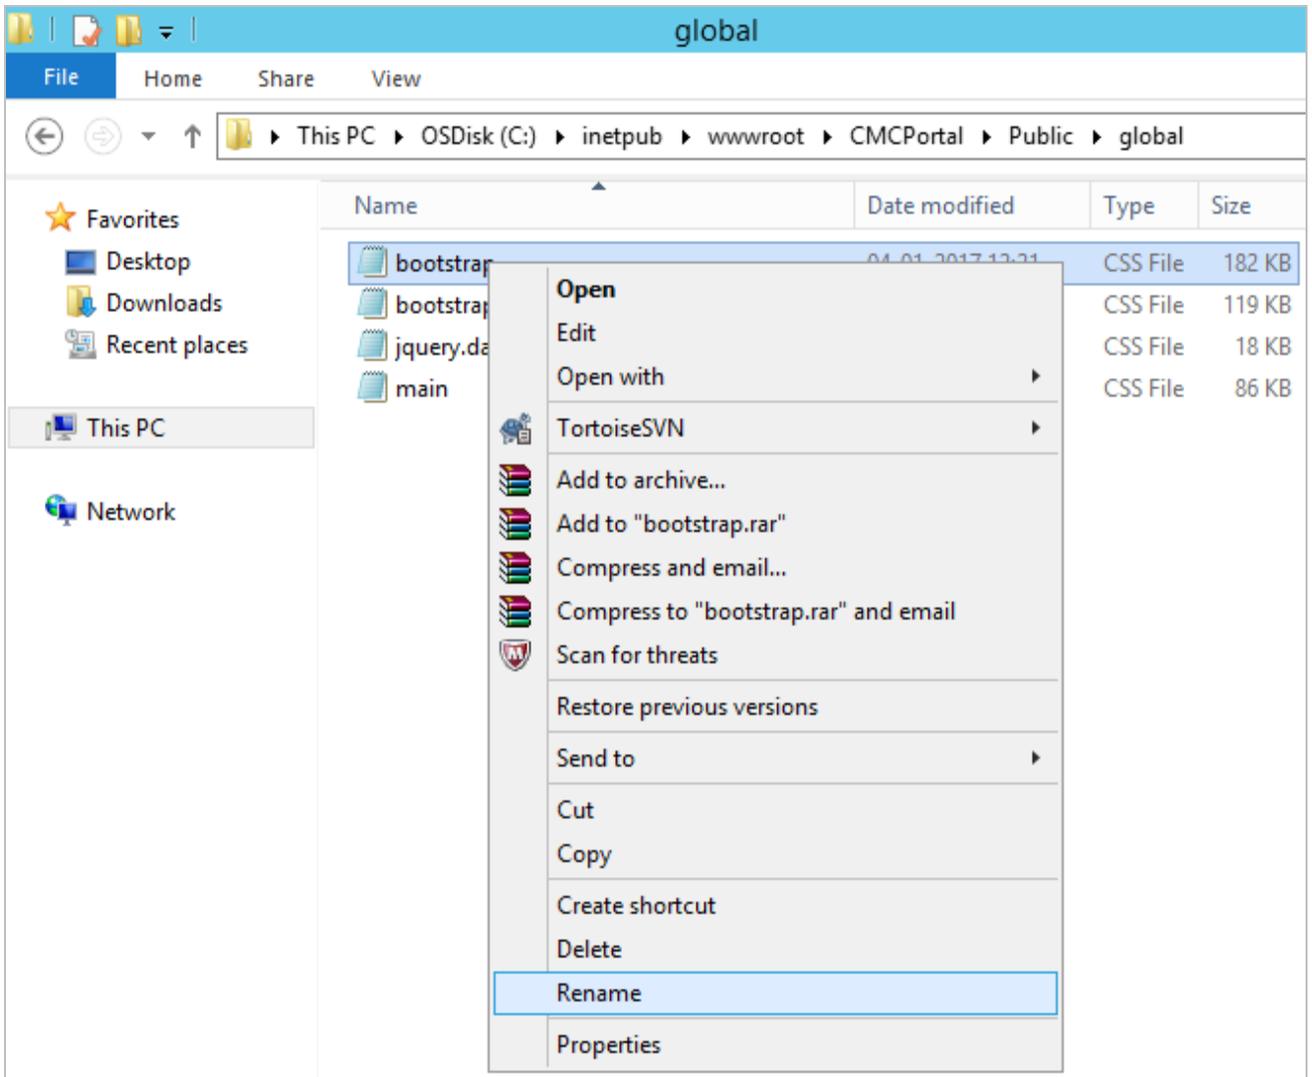

10. Paste in the bootstrap.css that was downloaded for the select theme. The new bootstrap theme name must be **bootstrap.css**.
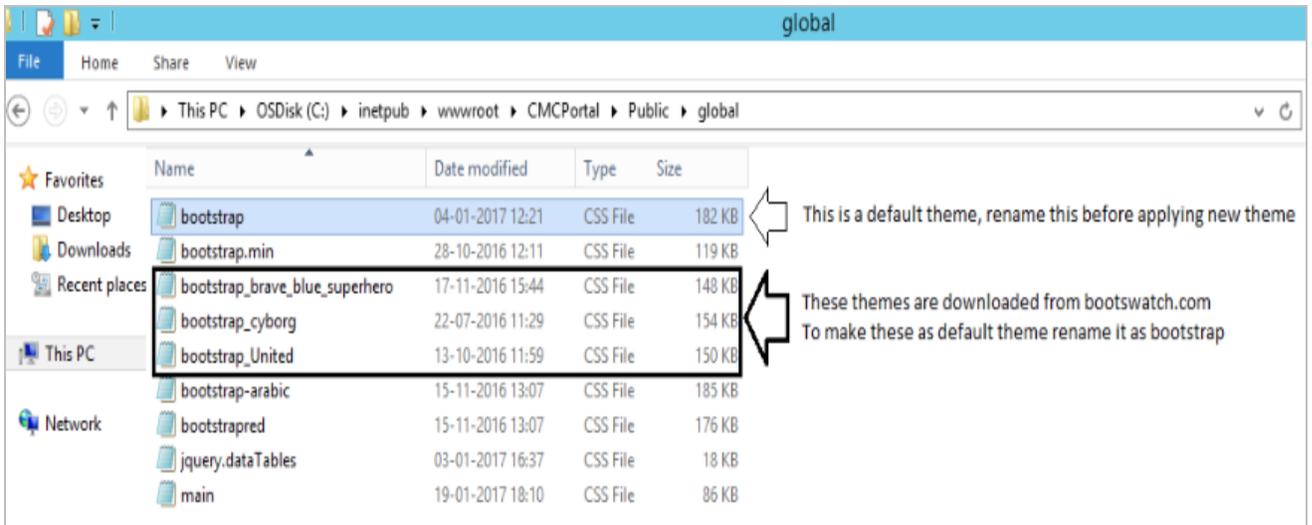

11. Right-click on the Command Prompt and select **Run as administrator**.
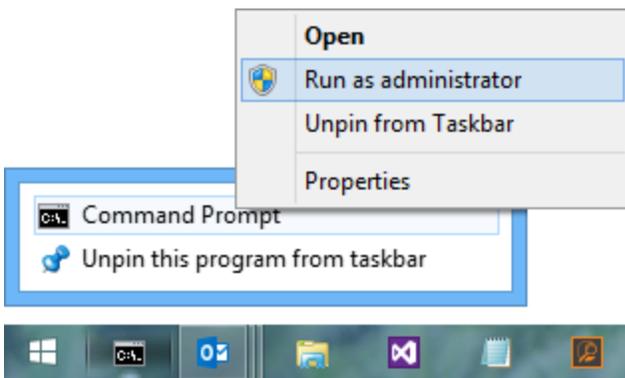

12. In the Command Prompt, type **iisreset** and run the command.

13. To verify that the new theme is applied, type the Portal URL in your browser and press **Ctrl+F5** to refresh the page.

Apply a Theme to Student STS Pages

The Student Portal Login, Create New Account, and Forgot Password pages are hosted on the CMCStudentSTS site. To keep the look and feel for Portal pages and Student STS pages in sync , we recommend using same theme for the CMCPortal and CMCStudentSTS sites on IIS.

For the CMCStudentSTS site, follow the same steps mentioned above for applying a theme to the CMCPortal site.

Copy the new **bootstrap.css** to the **~/Public/Global/CSS** folder of the **CMCStudentSTS** site.

Internationalization

Perform the following procedures to apply internationalization features to your Portal.

> When your Portal is hosted in a CampusNexus Cloud environment, your Portal administrator does not have access to upload branding files and cannot reset IIS either. Please contact Anthology Inc. Support (1-800-483-9106) to accomplish the tasks related to updating branding files or resource files for internationalization.

Add a new language

1. Access the **Portal Admin Console** and log in using the credentials provided.

2. In the Settings and Environment tab, click on **Language Options**.

   Settings and Environment

Site Settings	Dumps database SySiteSettings
Language Options	Set your campus languages here
Campuses	Maintain information related to campuses
PortalDocuments	Administer Portal Documents Settings
Version History	Version History
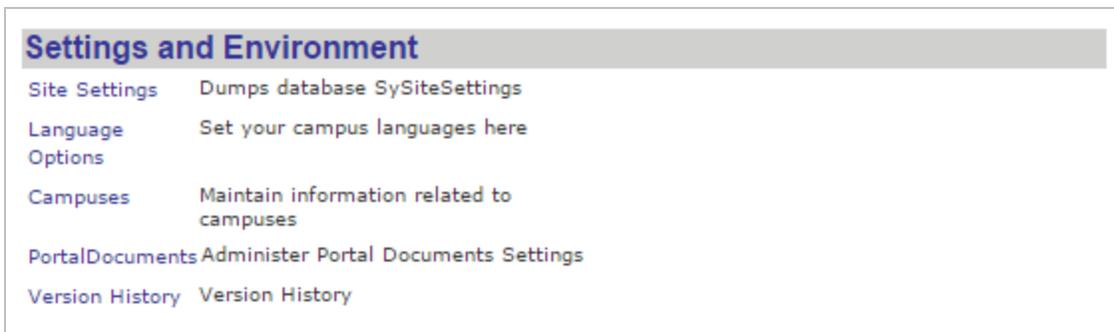

3. You will be redirected to the **Language.aspx** page.

4. Enter the **New Language** and **Language Code** and click **Add**.

   In the tool below you will be able to add / remove languages which will be applicable throughout the portal

Add New Language here	English
Add new Language Code here	en-US

5. Verify that the newly added language is activated for the Portal.

Activate or deactivate a language

1. Access the **Portal Admin Console** and log in using the credentials provided.

2. In the Settings and Environment tab, click on **Language Options**.

3. You will be redirected to the **Language.aspx** page.

4. Select a language from the list of inserted languages.
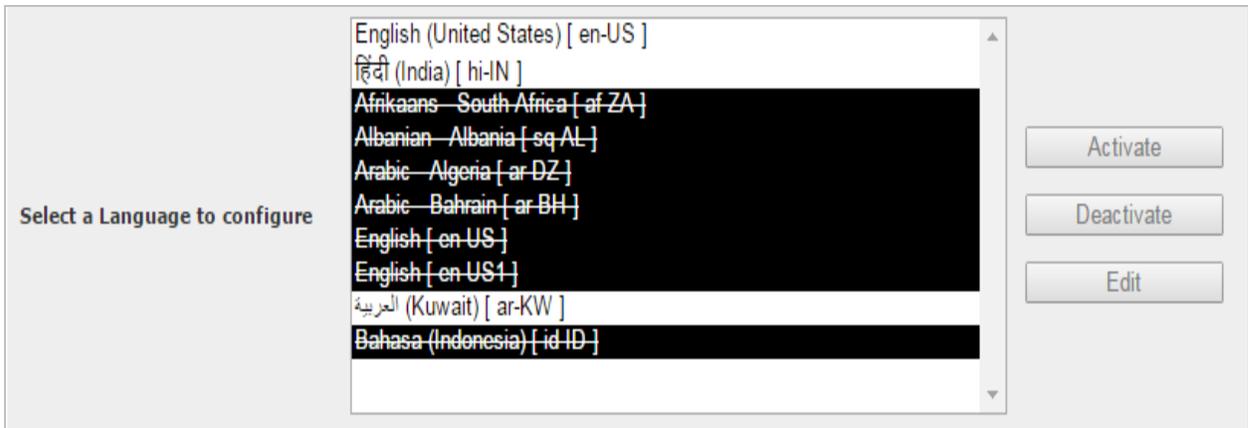

5. Click **Activate** to activate a language or click **Deactivate** to deactivate a language. Once deactivated, the language will be removed from language drop-down control in Portal. End-users will have to reload the page in Portal to see the changes.

Change the text of labels and titles

Note: These changes need to be carried out in all the language resource files.

1. Using a text editor such as Microsoft™ WordPad or Notepad™, open the following file: **App_GlobalResources\PackageName.resx**.
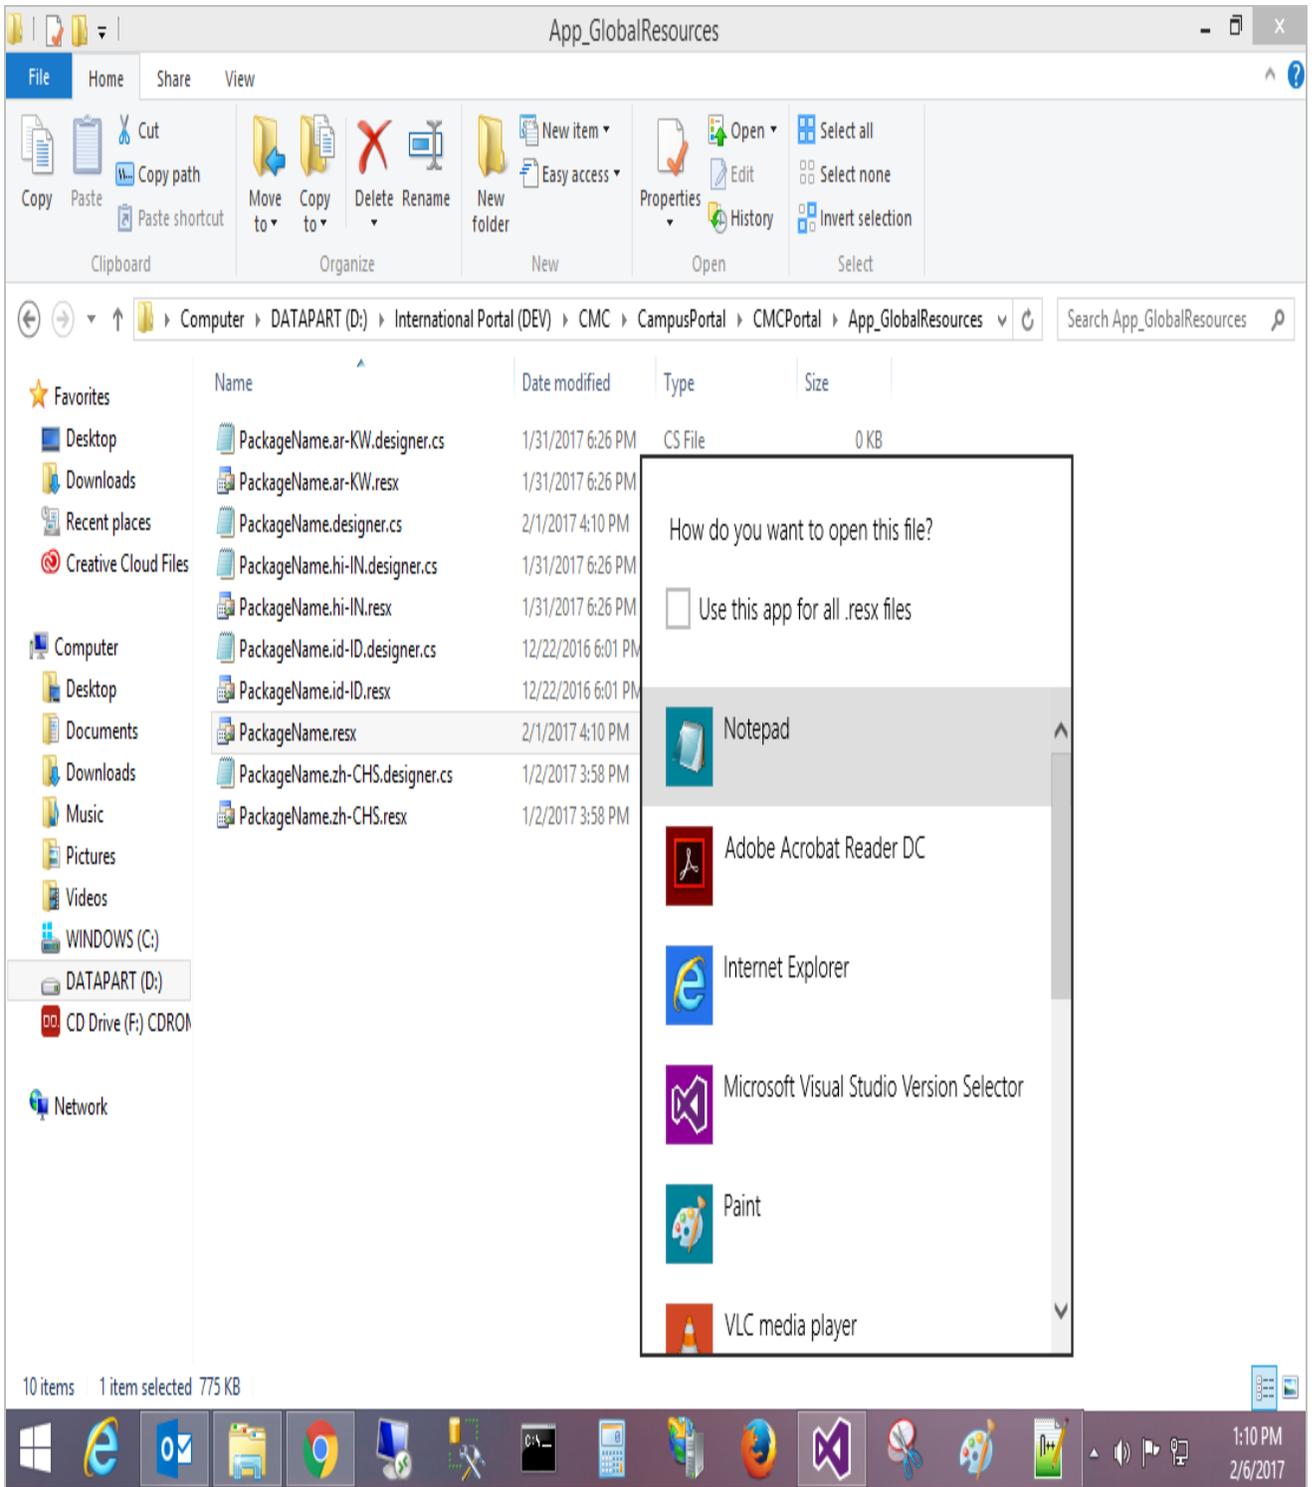

2. Change the labels and titles by editing the text within the <value>... </value> tags.

```
<data name="AccessRestriction" xml:space="preserve">
  <value>Your password cannot be changed due to Access restrictions. Please contact the System Administrator.</value>
</data>
<data name="AccInfoAccountDetail" xml:space="preserve">
  <value>Account Details</value>
</data>
<data name="AccInfoAmount" xml:space="preserve">
  <value>Amount</value>
</data>
<data name="AccInfoBal" xml:space="preserve">
  <value>Balance</value>
</data>
<data name="AccInfoBalance" xml:space="preserve">
  <value>Your balance for the selected enrollment is</value>          Change the value here
</data>
<data name="AccInfoCheckRef" xml:space="preserve">
  <value>Check#/Ref</value>
</data>
<data name="AccInfoDate" xml:space="preserve">
  <value>Date</value>
</data>
<data name="AccInfoDateReceived" xml:space="preserve">
  <value>Date Received</value>
</data>
<data name="AccInfoDueDate" xml:space="preserve">
  <value>Due Date</value>
</data>
<data name="AccInfoEnrollment" xml:space="preserve">
  <value>Select Enrollment</value>
```
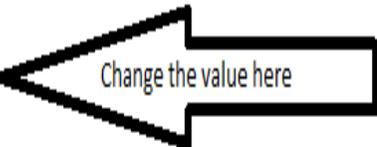

You can open packageName.Resx file in any open source resource file editor and convert the values in particular language. Save the file as per naming convention PackageName.Languagecode.resx.
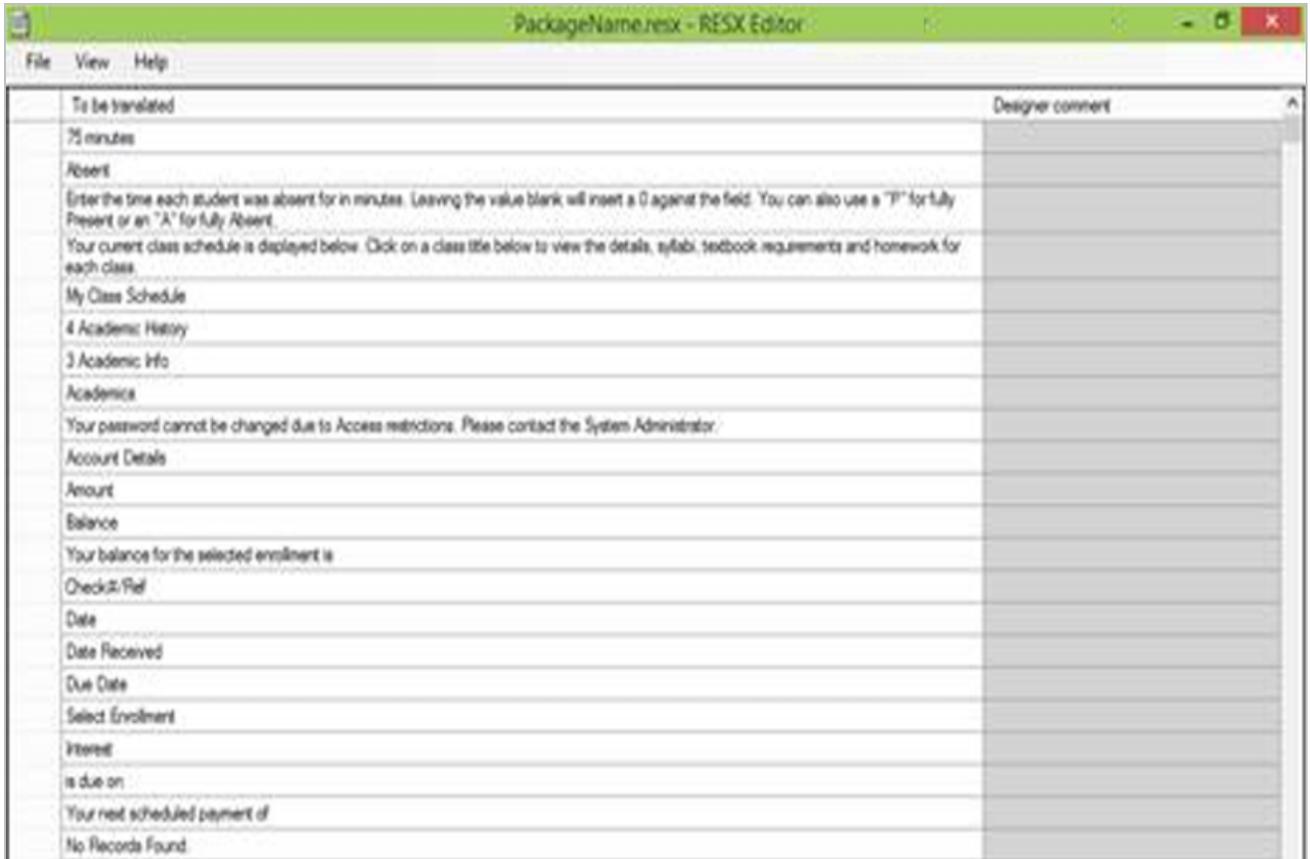

Add/change configurable values from the Portal Admin Console in the resource file

These changes will be applicable only to the resource files for languages other than English. For English, the configurable values will be always retrieved from the Config Tool Settings.

When a student or staff member visits the application, based on default language, the respective resource file is loaded into the application using resource manager and all labels are bound.

1. Log in to the Portal Admin Console and navigate to **Site Settings**.

2. Locate **UseResourceFileForDBValues** and set the value to **true** or **false**.

   If UseResourceFileForDBValues is set to *true*, the page title, description, portal messages, page wise messages,

and security questions configured in the Portal Admin Console are retrieved from the resource files.

Following are the conventions of various configurable items in the resource file when UseResourceFileForDBValues is set to *true*.

- Title and descriptions:

  To Add/Retrieve title and descriptions from the resource file, the convention is "Title_PageTitle_CampusID_wpPageID" and "Description_PageTitle_CampusID_wpPageID".

  The PageTitle, CampusId, and wpPageID can be retrieved from the wpCampusPage table in the Portal database.

  Example

  "Title_AccountInformation_1_9" and "Description_AccountInformation_1_9"

- Portal messages:

  To Add/Retrieve portal messages from resource file, the convention is "MessageName_CampusId".

  Example

  "Login_Error_1"

- Page wise messages:

  To Add/Retrieve page wise messages from resource file, the convention is "MessageKey_CampusId_PageID".

  Example

  "FacultyDesc_1_1"

- Security questions:

  To Add/Retrieve Security questions from Resource file, the convention is "SecurityQuestion_Role_SecurityQuestionId".

  Example

  "SecurityQuestion_APPL_12"

For the list of configurable values from the Portal Admin Console along with the conventions described above, see ConfigTool Messages in Resource File.

Branding for Multiple URLs

Institutions may require distinct branding for multiple campuses. The campus-specific branding needs to applied to all Portal pages and to the log on and authentication pages in Student STS. Each Portal instance will have a unique URL.

> When your Portal is hosted in a CampusNexus Cloud environment, your Portal administrator does not have access to upload branding files and cannot reset IIS either. Please contact Anthology Inc. Support (1-800-483-9106) to accomplish the tasks related to updating branding files or resource files for internationalization.

To implement the branding for multiple URLs, perform the following steps:

1. On the server that hosts the Portal application, navigate to **CMCPortal\Public**.

2. Create folders for each Portal instance. In our example, the Portal instances that have unique branding are **EU** and **KU**.

3. Create folders for **css**, **fonts**, and **images** and place the branding files in the folders for each of the Portal instances.
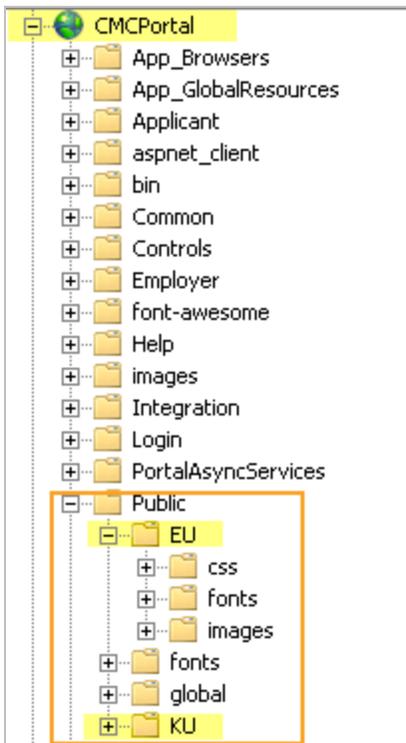

4. Navigate to **CMCStudentSTS\Public**.

5. Create folders for each Portal instance. In our example, the Portal instances that have unique branding are **EU** and **KU**.

6. Create folders for **css**, **fonts**, and **images** and place the branding files in the folders for each of the Portal instances.
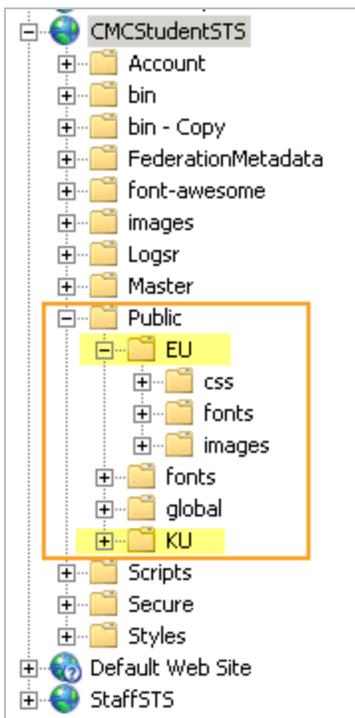

7. Access the **Portal Admin Console**.

8. Under **Settings and Environment**, click the **Campuses** link.

9. Locate the campus that is to be associated with a unique branding folder, click **Edit**, specify the name of the branding folder, and click **Update**.

   Repeat this step for any other campus that needs to be associated with a unique branding folder. In our example, one campus uses the folder KU, another campus uses the folder EU.

Campuses

21 campuses found

	ID	Description	Branding Folder	Session Timeout	Allow StuNum & PIN for Reg
Edit	1	Campus Management School of Arts	global	30	True
Edit	3	CMC Online	KU	30	False
Update Cancel	5	CBIT - Branch School	EU	30	☐
Edit	11	Campus Management School of Artifical Intelligence	global	30	False

Short URLs

When a document link is created from **Portal Admin Console > Portal Documents** by pasting a link into the **Location** field, the link is truncated without warning if it contains more than 128 characters. A truncated link cannot be resolved. A student trying to access the document will receive a "Page not found" error.

Using services like **tinyurl.com** and/or **Bitly.com**, institutions can create shortened links. Students can then navigate to **Student Portal > My Documents** and access the documents by clicking the links displayed in Documentation Center. The shortened links do not expire. They remain valid as long as the service that generated the URL remains up.

Forms Builder Example

Published Forms Builder sequences can have long URLs.

1. Navigate to the Published Sequences and click **Open**.
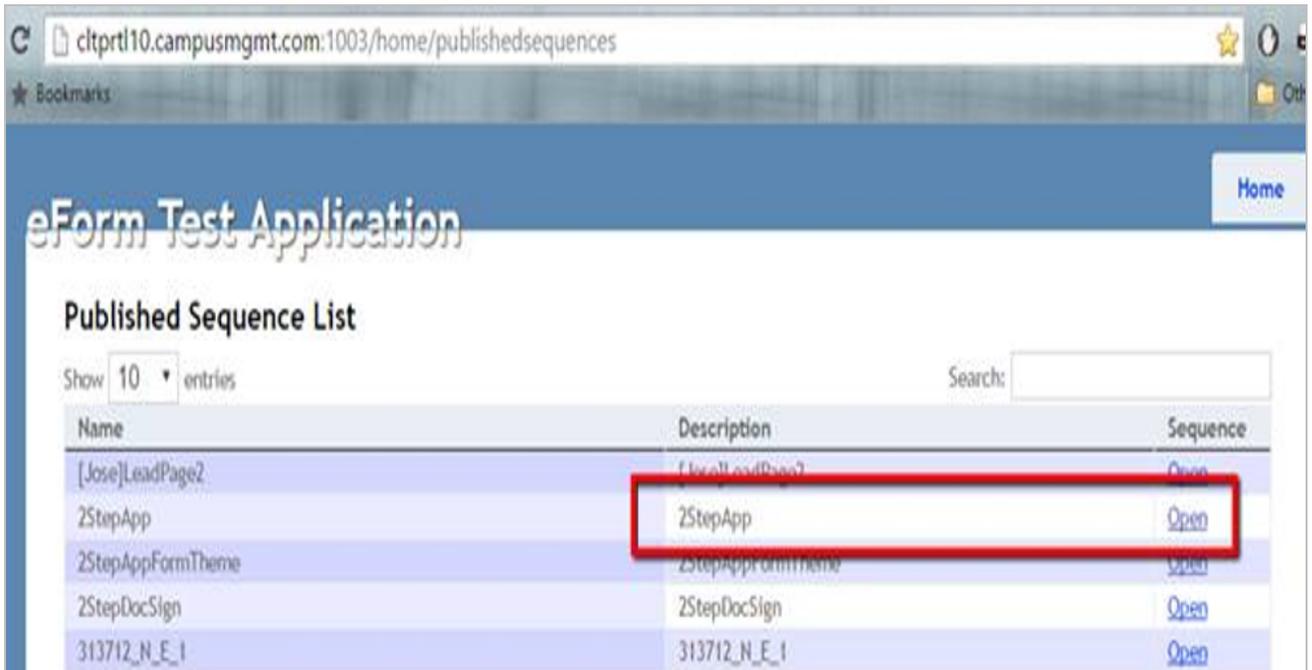

The link is opened in a browser. In our example, the link is:

```
https://cltprtl10.campusmgmt.com:81/Login.aspx?ReturnUrl=%2f%3fwa%3dwsignin1.0%26
wtrealm%3dhttp%253a%252f%252fcltprtl10.campusmgmt.com%253a1003%252feform%252f%26
wct%3d2016-04-05T19%253a39%253a33Z%26wreply%3dhttp%253a%252f%252fcltprtl10.
campusmgmt.com%253a1003%252feform%252f%26wctx%3drm%253d0%2526id%253dpassive%
2526ru%253d%25252feForm%25252fViewForm%25252f2StepApp%25252f0%26whr%3dhttp%253a

%252f0&whr-
r=http%3a%2f%2fcltprtl10.campusmgmt.com%3a1003%2feform%2f&AppType=Renderer]
```

2. **Copy** and **paste** this URL into an SQL query window or any editor that has a column/character count. You can see that this URL has 794 characters.

3. Open any browser and enter **tinyurl.com** in the address line.
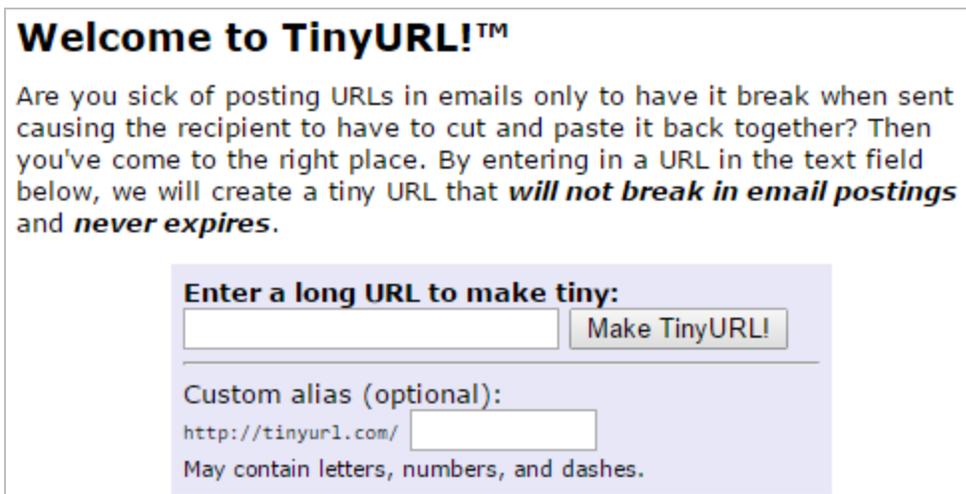

4. Enter in the 794-character **long URL** and, optionally, the **Custom Alias**. In our example the Custom Alias is *2StepApp* — the name of the Sequence).

5. Click the **Make TinyURL!** button.

   A confirmation displays your original URL and the shortened new URL.

TinyURL was created!

The following URL:

https://cltprtl10.campusmgmt.com:81/Login.aspx?
ReturnUrl=%2f%3fwa%3dwsignin1.0%26wtrealm%3dhttp%
253a%252f%252fcltprtl10.campusmgmt.com%253a1003%2

%3dpassive%26ru%3d%252feForm%252fViewForm%252f2
StepApp%252f0&whr=http%3a%2f%2fcltprtl10.campusmg
mt.com%3a1003%2feform%2f&AppType=Renderer

has a length of 794 characters and resulted in the following TinyURL
which has a length of 27 characters:

http://tinyurl.com/2StepApp
[Open in new window] [Copy to clipboard]

Or, give your recipients confidence with a preview TinyURL:

http://preview.tinyurl.com/2StepApp
[Open in new window]

6. In the Portal Admin Console, click **Portal Documents**.

7. Find the document you wish to associate with your URL and add the **tinyurl** to the **Location** field.

Home Page

Portal Documents

Campus List: 26911

Code	Description	Location	Test
!84754	!84754	http://www.cnn.com	Open
ALT01	alt01		Open
ALT02	alt02	http://tinyurl.com/2StepApp	Open
ALT03	alt03		Open
ALT04	alt04		Open

8. Test the newly saved shortened URL by clicking **Open**. The Portal login window is displayed. Navigate to the Document Center and click the document link.

Replace STS with Custom STS

The STS is a token service used by (relying parties) Portal and Forms Builder for authentication and account provisioning purposes. The STS is built using Windows Identity Foundation principal and it would be possible to replace the out of the box STS with a Custom STS. This topic outlines the information the Custom STS will have to provide to the relying party applications in terms of claims.

Current Responsibilities of STS

STS is responsible for the following items:

- All the authentication for Portal and Forms Builder (Student, Staff, Applicant, and Employer)
- Initiating Student account creation
- Active Directory exceptions
- Applicant account creation
- Request for Information (RFI)

List of Claims

The following claims should be provided by the Custom STS:

- C2kId
- CampusId
- Email
- EmployerId
- First Name
- Last Name
- Middle Name
- Name
- Role
- StaffId
- StudentId
- UserId
- Username

See the table below for details about the claims.

Claim Types and Detail

The following table lists an example for the required claim type.

Claim Name	Claim Type	Sample Value	Source
C2kId	http://s-chem-as.xmlsoap.org/ws/2010/08/identity/claims/c2kid	1234	Portal.wpUser-Relation.C2KId
CampusId	http://s-chem-as.xmlsoap.org/ws/2010/08/identity/claims/campusid	1000	Portal.wpUser-.CampusId
Email	http://s-chem-as.xmlsoap.org/ws/2010/08/identity/claims/email	bwal-lace@school.com	Portal.wpUser.eMail
Employ-erId	http://s-chem-as.xmlsoap.or-g/ws/2010/08/identity/claims/employerid	2000	PlEm-ployerr.PlEmployerrId
First Name	http://s-chem-as.xmlsoap.org/ws/2010/08/identity/claims/fname	Benjamin	Portal.wpUser-.FirstName
Last Name	http://s-chem-as.xmlsoap.org/ws/2010/08/identity/claims/lname	Wallace	Portal.wpUser-.LastName
Middle Name	http://s-chem-as.xmlsoap.org/ws/2010/08/identity/claims/mname	Francis	Portal.wpUser-.MiddleName
Name	http://s-chem-as.xmlsoap.org/ws/2010/08/identity/claims/name	bwallace	Portal.wpUser-.UserCode
Role	http://s-chem-as.xmlsoap.org/ws/2010/08/identity/claims/userroles	Staff	SySSOCon-fig.UserRoleType
StaffId	http://s-chem-as.xmlsoap.org/ws/2010/08/identity/claims/staffid	3000	syStaff.SyStaffId
StudentId	http://s-chem-as.xmlsoap.org/ws/2010/08/identity/claims/studentid	4000	syStudent.SyStudentId
UserId	http://s-chem-as.xmlsoap.org/ws/2010/08/identity/claims/userid	5000	Portal.wpUser.UserId

Claim Name	Claim Type	Sample Value	Source
Username	http://s-chem-as.xmlsoap.org/ws/2010/08/identity/claims/uname	benwallace	SySSOToken.UserInfo

Custom HTML Pages

As a Portal administrator, you can create custom HTML pages in Portal. The custom pages will be integrated into the Portal and will be displayed in the main window to the right side of the menu. Users don't need to navigate through external links to access integrated custom pages.

Custom pages can be added to new or existing menu groups. Custom pages need to be associated with the user's menu by enabling the menu transactions for given user roles.

Custom pages can include any type of web content such as text, links, images, and videos. The content is stored in a database table.

> ⚠️ When your Portal is hosted in a CampusNexus Cloud environment, if your custom HTML pages contains resources such as images or scripts, please contact Anthology Inc. Support (1-800-483-9106) to have those resources placed in the appropriate folder on the server. Ask Support for the path to those resources so that it is coded properly in your custom HTML pages.

Create Custom HTML Pages

1. Using Internet Explorer, log in to the Portal Configuration tool and access your campus.

2. Navigate to **Menu Groups**.

3. Right-click the Menu Group to which you want to add your custom HTML page and select **New Menu Item**.

4. In the Add Menu Item form, specify the **Menu Item Name**.

5. In the Menu Item Name drop-down list, select **Custom HTML Page** and click **Add Menu Item**.

6. In the left pane, click the new item that was just created. The Menu Item Configuration page is displayed. The External Link Type is Custom HTML Page.

7. Add the **custom HTML content** in the text field provided.

   Important:

   - The HTML tags in the custom page must **not** include the `<head>`, `</head>`, `<body>`, and `</body>` tags.

   - Be mindful of the styles applied in the custom page.

     For example, if your custom page contains the following CSS code, the `<div>` sections in all Portal pages will have a green background.

     ```
     <style>
     div {
         background-color:green;
     ```

```
}
</style>
```

If styling is needed on the custom page, create unique CSS classes. For example:

```
<style>
div.bg-green {
    background-color:green;
}
</style>
```

- If your custom page contains resources such as images or scripts, place those resources in the appropriate folder on your Portal server, and make sure the path to those resources is coded properly in the custom HTML page.

- Be careful to enter valid HTML code in the custom HTML page. The text area on the Menu Item Configuration page does **not** provide any validation of the HTML content. If there are errors on the custom HTML page, the functionality of the entire Portal can be impacted.

8. Click **Update Menu Item and External Link** to save the custom HTML content.

9. Navigate to **Security Roles** and select the role that is supposed to have access to the custom HTML page (Staff, Student, Applicant, Employer).

10. In the Menu Transactions and Quick Links Manager section, locate the custom HTML page, select the check boxes in the Add Menu and Quick Link columns (as applicable), and click the **Update Transaction Security** button.

11. On the Portal server, open the Command Prompt, type **iisreset** and run the command.

12. Log in to Portal with the appropriate role (Staff, Student, Applicant, or Employer) and click the **My Home Page** link to refresh the pages.

13. Select the menu item for the custom HTML page and verify that the content is displayed as expected.

Occupation Insight Pages

As a Portal administrator, you can create Occupation Insight pages in Portal. Occupation Insight content is derived from Power BI reports and dashboards about market data around specific career fields that are relevant to the students at your institution. The Occupation Insight pages will be integrated into the Portal and will be displayed in the main window to the right side of the menu. Users don't need to navigate through external links to access these pages.

Occupation Insight pages can be added to new or existing menu groups. The pages need to be associated with the user's menu by enabling the menu transactions for given user roles.

1. Using Internet Explorer, log in to the Portal Configuration tool and access your campus.

2. Navigate to **Menu Groups**.

3. Right-click the Menu Group to which you want to add Occupation Insight page and select **New Menu Item**.

4. In the Add Menu Item form, specify the **Menu Item Name**.

5. In the Menu Item Name drop-down list, select **Power BI Visualizations** and click **Add Menu Item**.

6. In the left pane, click the item that was just created. The Menu Item Configuration page is displayed. The **External Link Type** is **Power BI Visualizations**.
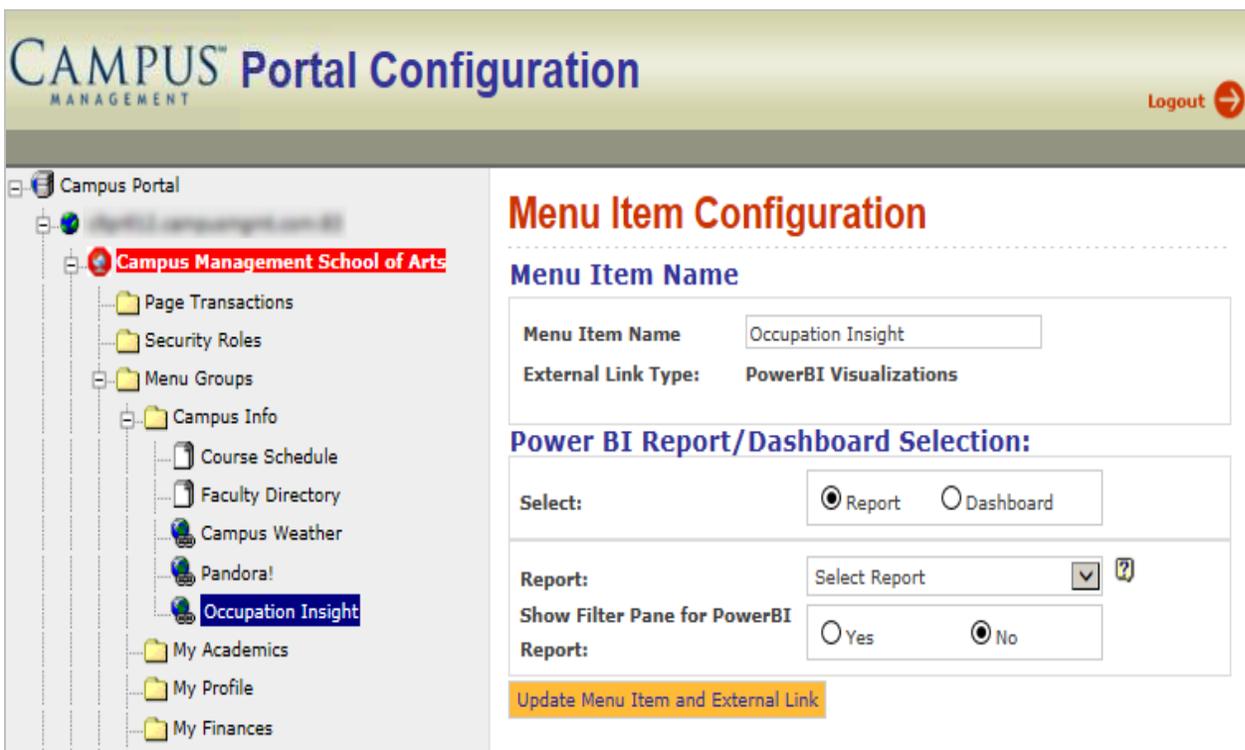

7. In the Power BI/Dashboard Selection area, under "Configure Report/Dashboard Using", select **Occupation Insight**.

8. In the "Workspace (Institution only)" drop-down list, select your institution's **Workspace**.

9. In the "Select Type" options, select **Report** or **Dashboard**.

   - If you chose Report, select a **report name** in the Report drop-down list and select **Yes** or **No** in the Show Filter Pane for Power BI Report field.

   - If you chose Dashboard, select a **dashboard name** in the Dashboard drop-down list.

10. Click **Update Menu Item and External Link** to save the menu item settings.

11. Navigate to **Security Roles** and select the role that is supposed to have access to the Occupation Insight page (Staff, Student, Applicant, Employer).

12. In the Menu Transactions and Quick Links Manager section, locate the Occupation Insight page, select the check boxes in the Add Menu and Quick Link columns (as applicable), and click the **Update Transaction Security** button.

13. On the Portal server, open the Command Prompt, type **iisreset** and run the command.

14. Log in to Portal with the appropriate role (Staff, Student, Applicant, or Employer) and click the **My Home Page** link to refresh the pages.

15. Select the menu item for the Occupation Insight page and verify that the content is displayed as expected.

    The image below shows an example of an Occupation Insight report.

Mobile Version of Power BI/Occupation Insight Reports

When an Power BI or Occupation Insight report is configured for display in the Student Portal or Faculty Portal, the Portal will detect whether or not the user is logged in via a mobile device.

- If mobile layout exists for report, the mobile layout will be rendered.
- If mobile layout does not exist for report, the regular (desktop) layout will be rendered.

When the Portal is launched in a desktop, the report will be rendered in desktop layout regardless of whether or not a mobile layout exists for the report.

Power BI Reports Integration

Portal version 20.0 supports the integration of **any** Power BI reports published on the institution's Power BI work-spaces. The institution can add a Power BI account in the Portal Admin Console to grant the account the capability to embed the institution's Power BI reports into the Portal. Previously, institutions were able to embed only Power BI reports associated with Occupation Insight into the Student Portal (see Occupation Insight Pages).

For example, institutions who use Anthology Inc.'s Analytics product maintain their own Power BI Pro accounts to manage and disseminate reports for the institution. This enhancement enables the institutions to incorporate their Power BI reports into the Student Portal in addition to any Occupation Insight reports.

To integrate Power BI reports, you need to take the following steps:

- Configure a Power BI user account in the Portal Admin Console
- Configure the Power BI reports in the Portal Configuration tool

Configure a Power BI User Account

1. Using Internet Explorer, log in to the **Portal Admin Console**.

2. Click the **Power BI User** link in the Administration section. The Power BI Admin page is displayed. Entries in all fields are required.

3. Select the **URL/Site** for your portal.

4. Specify the **User name** (max. 50 characters). The User name is expected to be in valid email address format.

5. Specify the **Password** (max. 50 characters).

6. Specify the **Client ID**. The Client ID is expected to be a valid GUID.

7. Click **Save**. The credentials are encrypted and saved in the wpURL table.

After a Power BI user account has been configured, all Power BI workspaces that the user account has access to will be available for selection when adding a Power BI page to the Student Portal (see Configure Power BI Reports).

Institutions should provision a Power BI user account that has appropriate access to workspaces that contain reports/dashboards that should be made available to students and/or faculty users of the Portal.

Configure Power BI Reports

1. Using Internet Explorer, log in to the Portal Configuration tool and access your campus.

2. Navigate to **Menu Groups**.

3. Right-click the Menu Group to which you want to add Power BI reports and select **New Menu Item**.

4. In the Add Menu Item form, specify the **Menu Item Name**, e.g., PowerBI DB Report.

5. In the Menu Item Name drop-down list, **select Power BI Visualizations** and click **Add Menu Item**.

6. In the left pane, click the item that was just created. The Menu Item Configuration page is displayed. The **External Link Type** is **Power BI Visualizations**.

7. In the Power BI/Dashboard Selection area, under "Configure Report/Dashboard Using", select **Institution's Power BI**.

8. In the "Workspace (Institution only)" drop-down list, select your institution's **Workspace**.

9. In the "Select Type" options, select **Report** or **Dashboard**.

   - If you chose Report, specify a **Report ID** for the Power BI report to be displayed for this link and select **Yes** or **No** in the Show Filter Pane for Power BI Report field.

   - If you chose Dashboard, select a **dashboard name** in the Dashboard drop-down list.

10. Click **Update Menu Item and External Link** to save the menu item settings.

11. Navigate to **Security Roles** and select the role that is supposed to have access to the Power BI page (Staff, Student, Applicant, Employer).

12. In the Menu Transactions and Quick Links Manager section, locate the Power BI page, select the check boxes in the Add Menu and Quick Link columns (as applicable), and click the **Update Transaction Security** button.

13. On the Portal server, open the Command Prompt, type **iisreset** and run the command.

14. Log in to Portal with the appropriate role (Staff, Student, Applicant, or Employer) and click the **My Home Page** link to refresh the pages.

    Note: If you are using the Chrome browser, make sure that third party cookies are allowed. This setting is required to access Power BI reports.

15. Select the menu item for the Power BI page and verify that the content is displayed as expected.

    The image below shows an example of a Power BI report.

Mobile Version of Power BI/Occupation Insight Reports

When an Power BI or Occupation Insight report is configured for display in the Student Portal or Faculty Portal, the Portal will detect whether or not the user is logged in via a mobile device.

- If mobile layout exists for report, the mobile layout will be rendered.
- If mobile layout does not exist for report, the regular (desktop) layout will be rendered.

When the Portal is launched in a desktop, the report will be rendered in desktop layout regardless of whether or not a mobile layout exists for the report.

External Application Integration

Path: Portal Configuration Tool > (select URL and campus) > Menu Groups > Add New Item

Portal Configuration Tool > (select URL and campus) >Menu Groups > External Links

Portal > Student/Staff Portal > External Links

Institutions that implement portals desire a level of content and application aggregation that will allow users to access centralized resources within the framework of the portal. The portal is considered a gateway to all relevant online content and services, therefore it would be beneficial to allow users to launch other applications quickly and easily. In other words, institutions should be able to use the Portal for CampusNexus Student to consolidate access to external content and applications within their enterprise.

The rapid adoption of systems, such as course management systems, and online libraries, has resulted in campus constituents accessing a number of online resources. Currently, users of Portal for CampusNexus Student are unable to aggregate content from these various applications into Portal or provide seamless user launching to an external application. Portal currently supports the creation of simple hyperlinks to external applications by requiring additional actions from the user. However, enhanced integration is needed within the Portal framework, including seamless launching to an external application.

This enhancement provides the following features to address these issues:

Portal Configuration	Institutions will be able to define external application pages, which may be used to consume or link to external content or applications.
	When defining an external application page, which will seamlessly consume/link external content or applications, institutions will be able to define whether the content or application will be loaded within the Portal framework or in a new window.
	When defining an external link page, which will seamlessly consume/link external applications, institutions will be able to define whether single sign on capability will be accommodated via a "trusted login".
User (Student, Faculty or Employer)	Users with security access to an external page will be able to view the content and/or application being consumed or linked.
Miscellaneous	When externally linked content or applications cannot be loaded, the system will provide a message if it is configured by the institution.
	A dependency exists for the single sign-on (SSO) authentication web service. When trusted login is used to achieve seamless single sign-on, modification of the target or destination application will be required.

Configuration Steps

To create and configure the external application page, perform the following steps as Portal administrator:

1. Use Internet Explorer and sign in to the **Portal Configuration** tool.

2. Select a **URL** and **campus**.

3. Navigate to **Menu Groups** and select **External Links**.

4. Right-click External Links and select **New Menu Item**.

5. Specify a **Menu Item Name**, select the **External Link Page** check box, and click **Add Menu Item**.

6. Select the new menu item from the left menu below the 'External Links' label to configure it as follows:

   a. Select whether the new menu item will be launched as **pop-up**.

   b. Select the link in the **External Links** box.

   c. Specify the **Link Title**, **Description**, **Target URL**, and **Target URL Name**.

   d. Configure the External Link as simple content (static content or website without authentication) OR as an external application which would require authentication for seamless login.

      ○ If the external application is simple content, under Requires Auto-Login (SSO), select **No**.

      ○ If the external application requires authentication, under Requires Auto-Login (SSO), select **Yes**, and configure the **Auto-login URL**, **Session Timeout**, and **External Vendor IP Address**.

   Portal tries to get the IP address of the external app/integration service making a call to Portal.

      ○ If this external app/integration service is deployed in same network as Portal, then the External Vendor IP address would be the internal IP address.

      ○ If this external app/integration service is deployed outside of the network, then the IP address needed will be the public IP address. In case of Azure, most URLs are routed as public URL, so it will need the public IP address.

7. Click **Update Link** to complete the configuration for an external application page.

8. Repeat the process to add additional menu items.

External Application Display in Portal

Portal users with permission to access external application pages may sign into the Student Portal, Faculty Portal, or Employer Portal and navigate to an external application page.
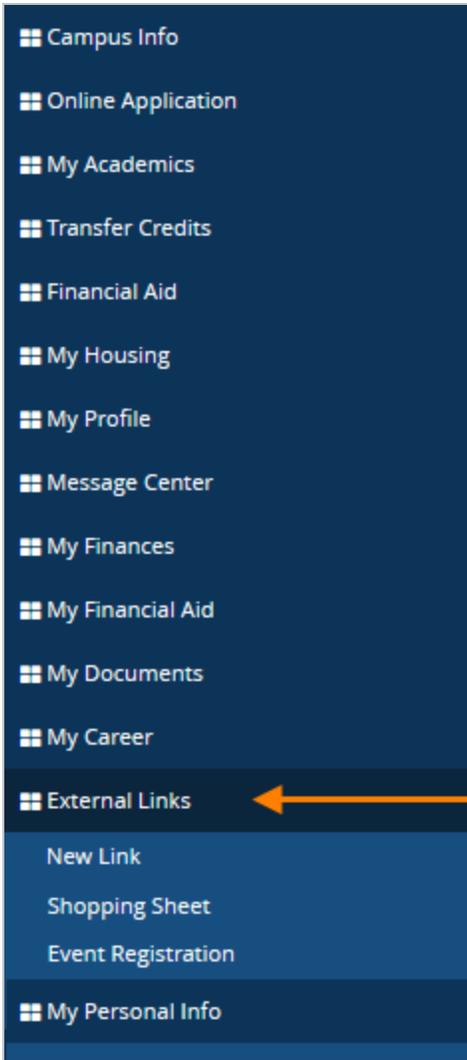

When the menu item is selected on the left-pane navigation menu, a page will display all available links, which the user will click to navigate to the external application page.

- If the application is being embedded within Portal, the external application page will be displayed in the right pane.
- If the external application is configured a pop-up window, a new window will be displayed.
- If the external application cannot be presented, Portal will display an error message.

The following image depicts how an external application may appear when the pop-up window option is configured. This is a two-step process. The external page cannot be launched directly from the left-pane navigation links.

When the user clicks on the Google link shown above, the external application page will appear in a new browser window or in a new browser tab.
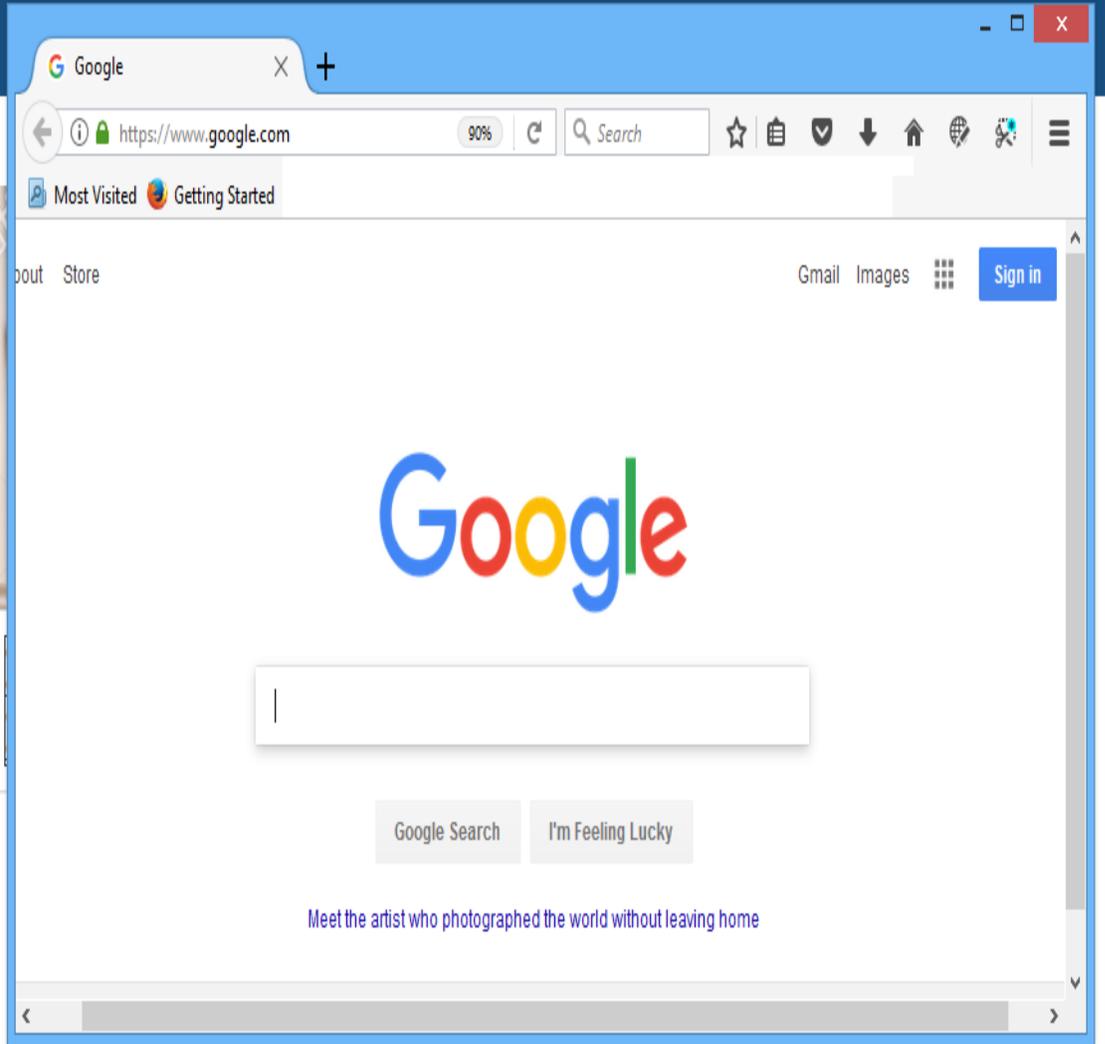

External Vendor Requirements

This section provides high level guidance and direction for third party vendors attempting to provide seamless login integration with the Portal for CampusNexus Student.

One of the features of Portal is its ability to seamlessly integrate with external applications that offer protected web content. Traditionally, access to secure content within an external website would likely require a manual intervention by the web user to explicitly login. However, Portal offers third party vendors the option to fully integrate by supporting single-sign-on or seamless login authentication.

The following pages outline the necessary requirements and development tasks that must be achieved by the external vendor to support seamless authentication from Portal.

Background

This section describes the front-end of the Portal web application. These aspects are directly visible to the user and are high-level.

Web Portal

This image depicts the launch page shell that will be displayed if an external application (EA) link has been configured for the given client. The external content is embedded in an IFrame within the Portal window. For security reasons many web sites do not allow being displayed in an IFrame.

The following image depicts how an external application may appear when a pop-up link is invoked from within Portal (launch page before pop-up occurs). Pop-up displays are a two-step process and cannot be launched directly from the left-pane navigational links.
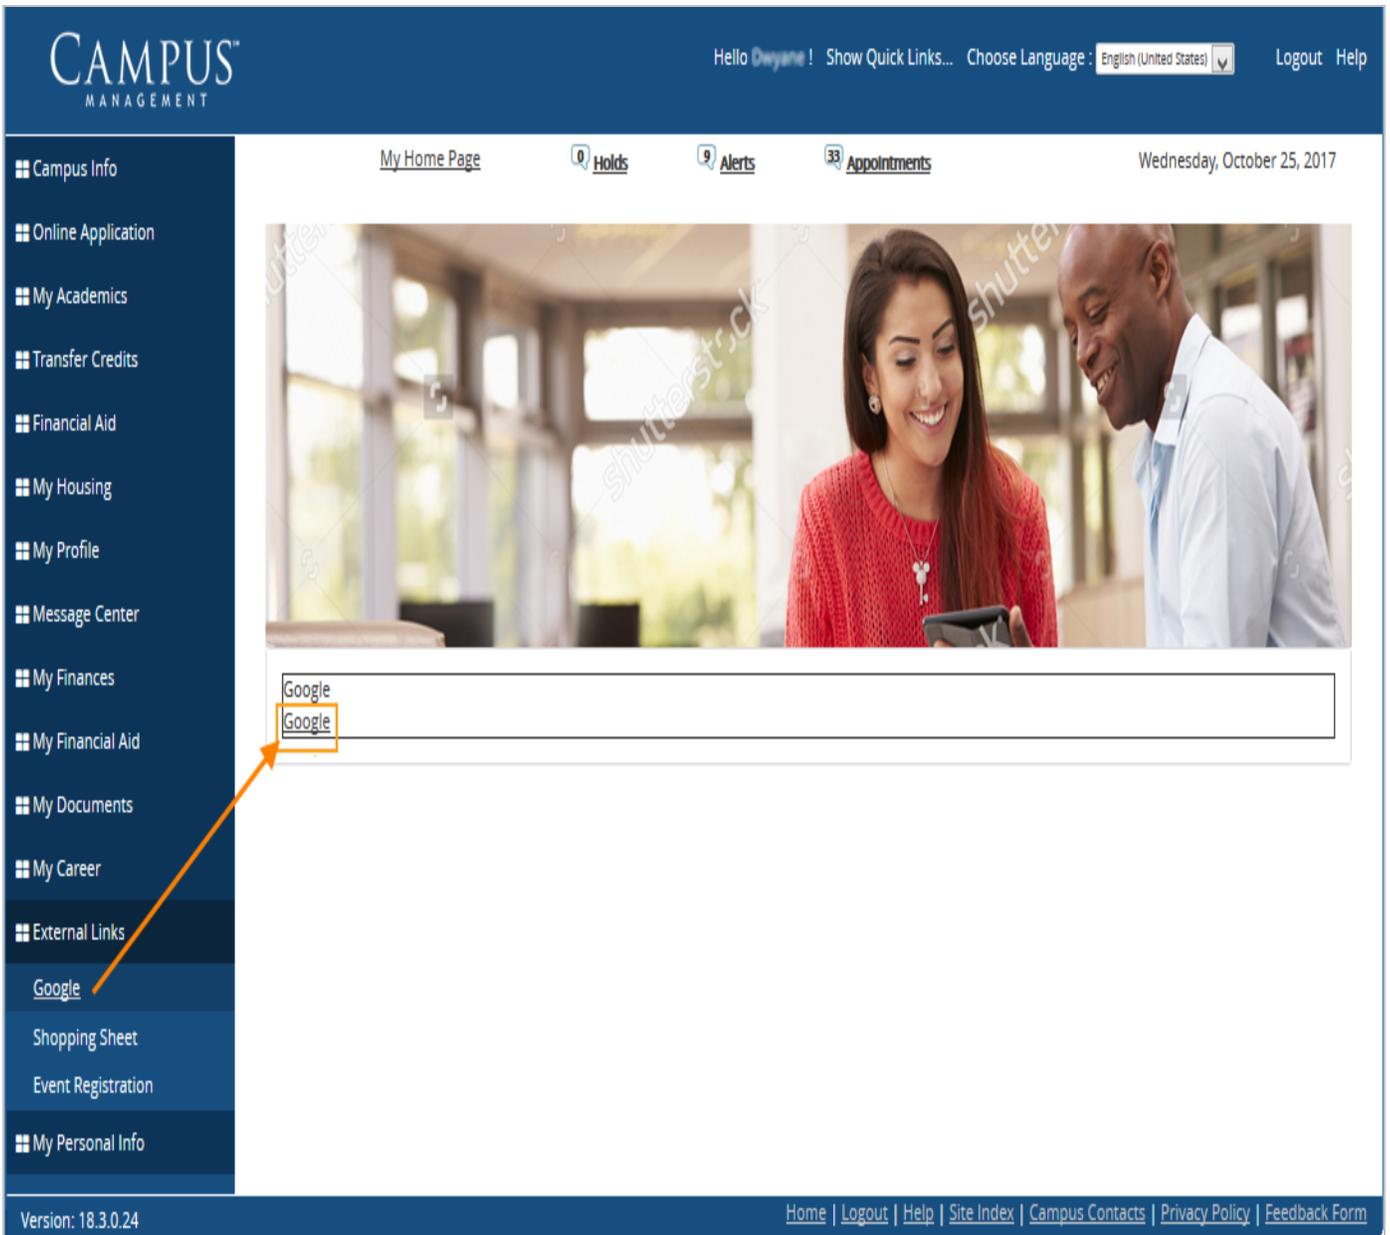

The following image depicts how an external application may appear in a new browser window or tab when a pop-up link is invoked from within Portal .

Portal Configuration Tool

In order for the external link to appear within Portal, the external link must be configured in the Portal Configuration tool using the following path: **Configuration Tool > Menu Groups > External Links**.

The following fields must be completed.

- Link Title   Title of the external application link

- Link Description   Description of the external application link

- Auto Login URLClient's   Auto-Login page

- Target Page URL   Secure page within external application

- Pop-up or Embedded   true/false

- ImageURL   only applicable to pop-up links

To add an external link:

1. Open the Portal Configuration tool.

2. Navigate to **Menu Groups** > **External Links**.

3. Right-click External Links and select **New Menu Item**.

4. Specify a **Menu Item Name**, select the **External Link Page** check box, and click **Add Menu Item**.

   Note: You will need to click on the left pane Menu Group node that was just created in steps 3-4.

5. In the Menu Item Configuration page, fill out the form fields to specify either a static or single sign-on external link, and whether that link should appear as a pop-up or as an embedded display, and complete the External Link Information.

Application Architecture

Users that have already authenticated within Portal, may access external application content via a seamless login methodology. The following sequence diagram depicts the interactions between the end user, Portal, the proposed integration web services, and the external application.

Sequence Diagram – End-to-End Simplification
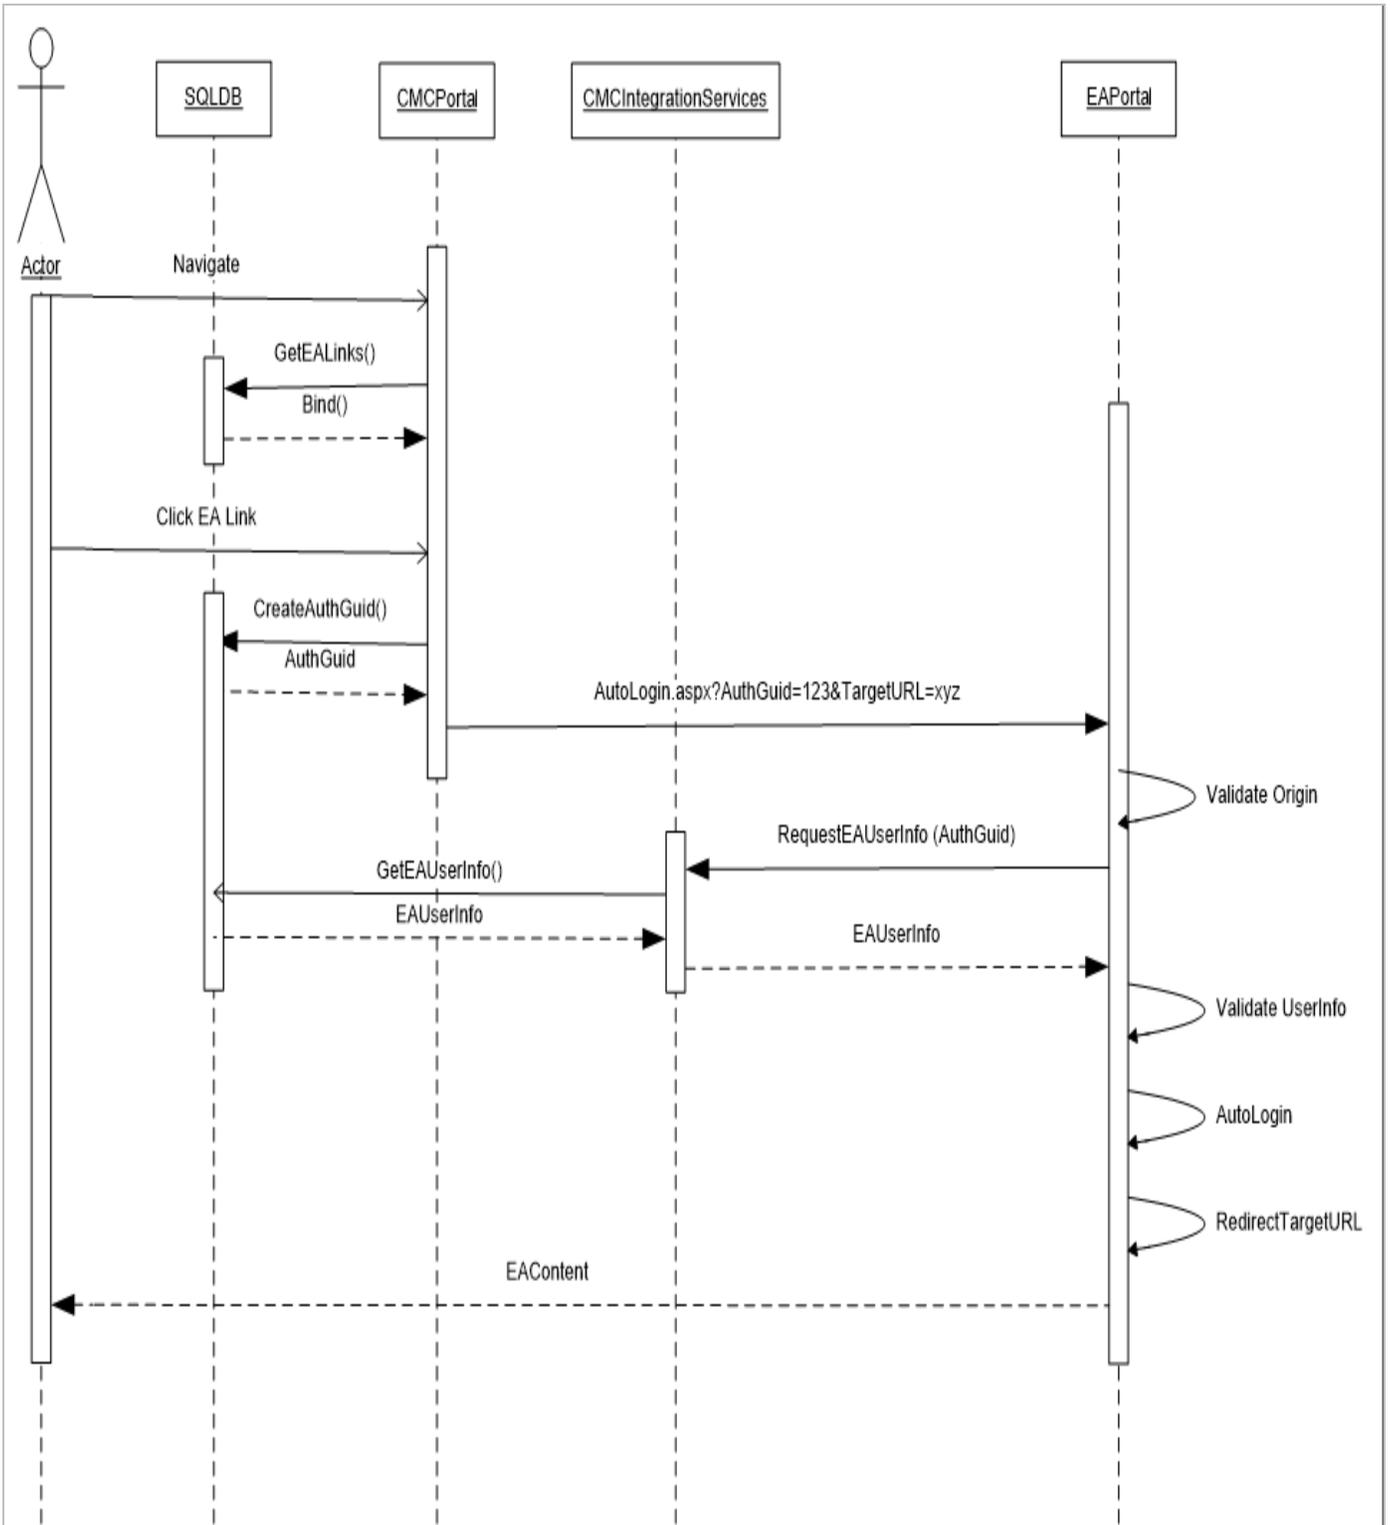

This simplified diagram shows the interaction between Portal and the external application. When a user attempts to access external content, a time-to-live GUID is created in the CampusNexus Student database and is sent to the

external application to use as a temporary access key into the web services. The external application must support a custom AutoLogin.aspx page and must process the GUID, TargetURL, and orchestrate communications with the integration web service.

The web service is consumed by the external application to request user specific information that facilitates identification of the user, and results in an automatic and seamless login to the external application. The user is then presented with access to external application content.

Security

Interaction with an external application raises several security concerns related to the exposure of confidential information. During the execution of the seamless login transaction, a time-to-live GUID is transferred from Portal to the external application. If not encrypted, the GUID could be intercepted by a third party and used to obtain access to the Integration web services and thereby access a user's confidential information. The following steps should be considered to tighten the security model:

Requirements:

A. The external application should attempt to validate the source of the page request originating from Portal. All seamless login attempts should be limited to pages within Portal.

B. Integration web services should attempt to validate the source of the web service request. All requests should be limited to pages within the external application.

External Vendor Integration

In the following sections, we will highlight the requirements and developmental duties placed on the external application provider to fully integrate with Portal.

Simplified Sequence Diagram

The following diagram presents the seamless login sequence. The external application provider must meet certain development tasks to support the seamless integration.
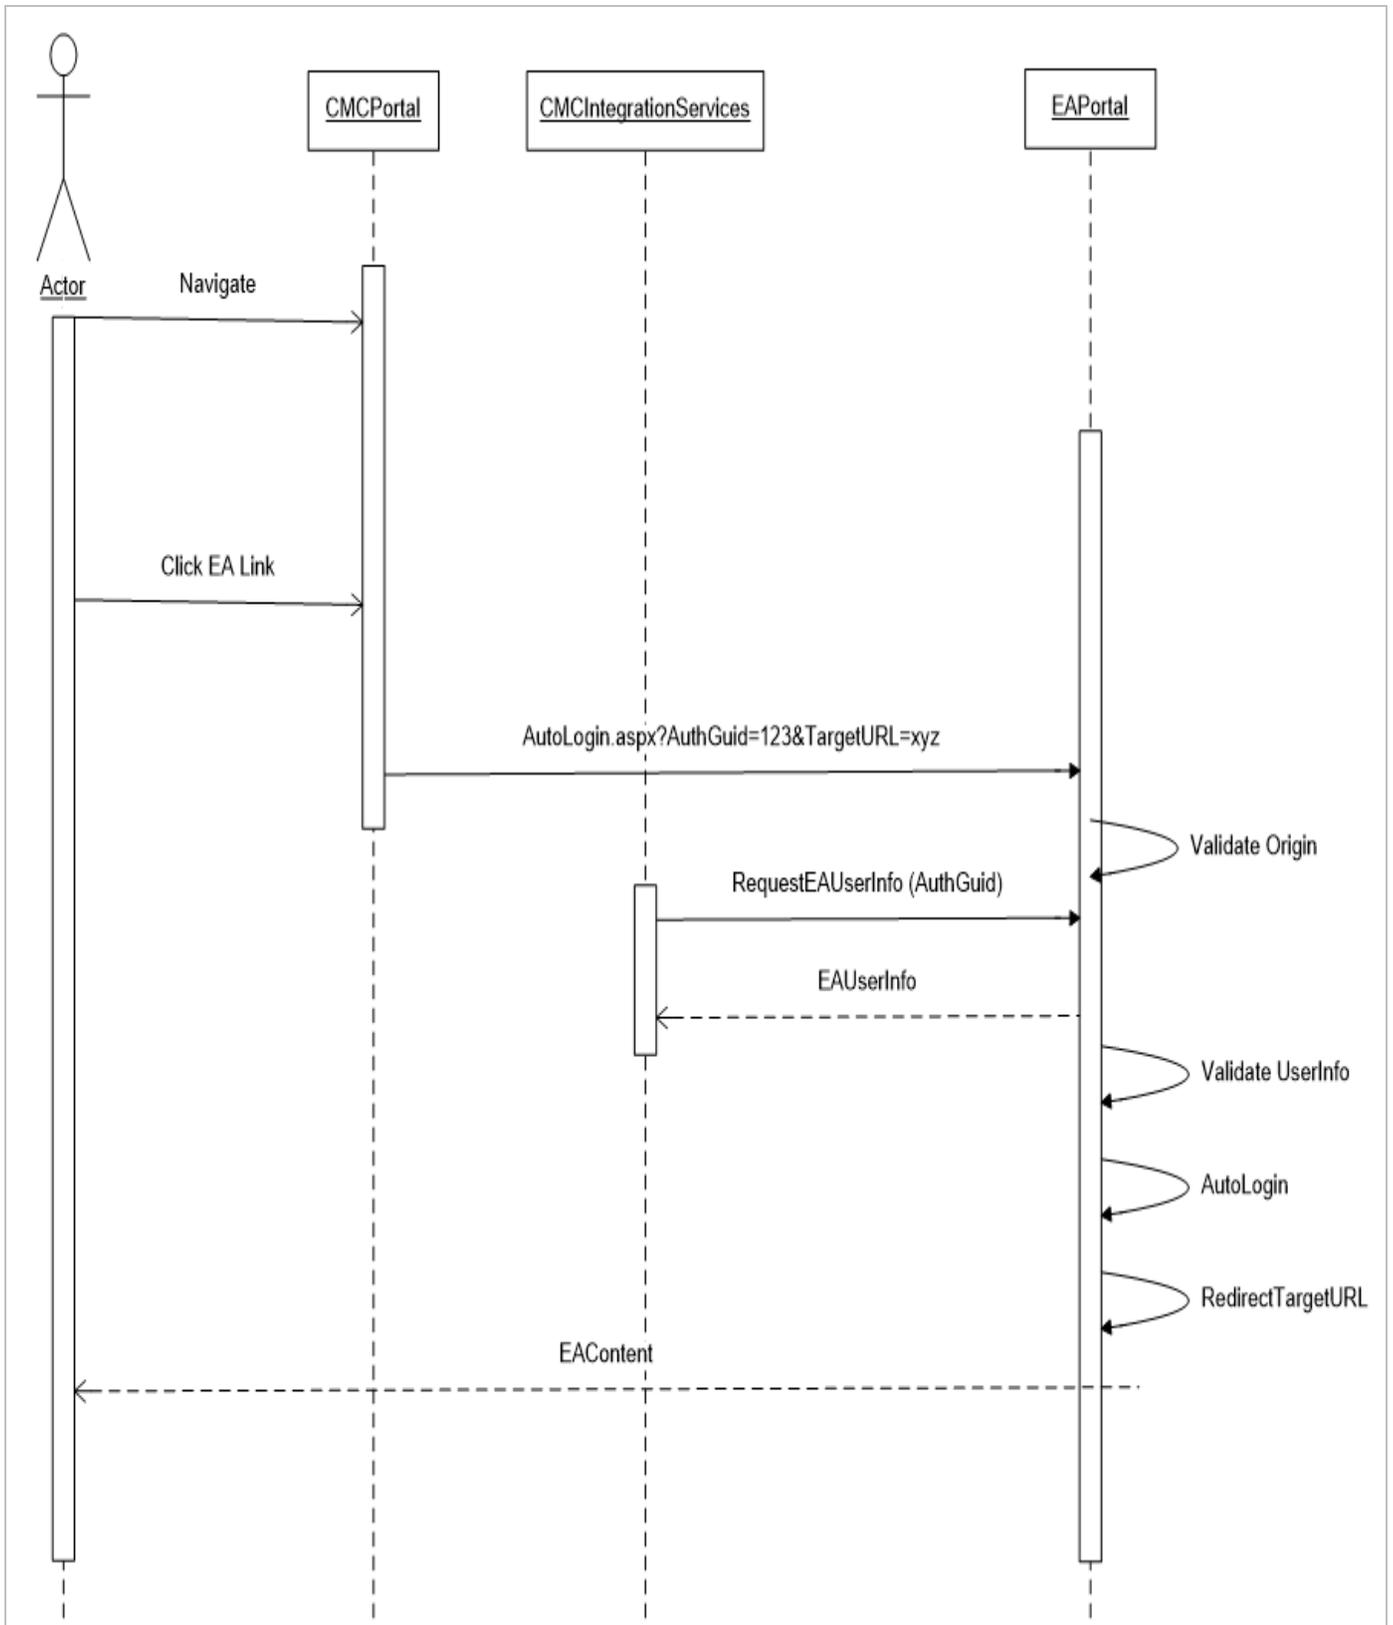

Development Tasks

1. Develop the custom auto-login web page.

   - The page must be capable of receiving the AuthGuid and TargetURL query-string variables.

   - The page need not have any graphical UI components,

2. Validate the origin of the auto-login request.

   - For security reasons, the auto-login page should also validate the source of the request to ensure that it originates from Portal.

   - The auto-login page must execute on a web server with a well known IP address since the integration web service will reject requests made from unknown addresses.

3. Request user authorization data from the integration web service

   - The auto-login page must hold a web reference to the integration web service (see Integration Web Service WSDL).

   - The RequestUserInfo method should be invoked.

   - The ExternalAuthorization object should be interrogated for a suitable AccessDenyType value of 'SUCCESS'.

4. Use the authorization data to validate the user

   - Once the ExternalAuthorization is successfully returned from the integration web service, the authorization values should be used to authenticate the Portal within the external vendor's internal database.

   - If the authorization data does not form a match, the user should be redirected to a suitable 'Access Denied!' web page.

5. Automatically login the user

   - If the authorization data does form a valid match within the external vendor's database, the user should be automatically logged into the external site.

6. Redirect the user to the secured TargetURL web page

   - If authorized, the user should be redirected to the TargetURL page that was originally passed as a query-string variable to the Auto-Login page during the initial process inception.

Integration Web Service

The integration web service supports a single method called 'RequestUserInfo' which returns a strongly typed business entity called 'ExternalAuthorization' (see Business Entity Schemas). The third party vendor wishing to seamlessly integrate withPortal must consume this web service when responding to an auto-login request through the utilization of the authorization GUID supplied from the initial Portal request.

The return object can then be used by the third party vendor to decide whether or not to grant the auto-login request.

CMCIntegrationServices

```
{
 [WebMethod]
 ExternalAuthorization  RequestUserInfo( string authGuid );
}
```

```xml
<?xml version="1.0" encoding="utf-8" ?>
<ExternalAuthorization>
  <AccessDenyType>1</AccessDenyType>
  <UserID>1</UserID>
  <RoleType>(RoleType)</RoleType>
  <CampusVueID>(string)</CampusVueID>
  <CampusPortalID>(string)</CampusPortalID>
  <StaffCode>(string)</StaffCode>
  <StudentNumber>(string)</StudentNumber>
  <UserCode>(string)</UserCode>
  <FirstName>(string)</FirstName>
  <LastName>(string)</LastName>
  <HomePhone>(string)</HomePhone>
  <WorkPhone>(string)</WorkPhone>
  <CellPhone>(string)</CellPhone>
  <Email>(string)</Email>
  <PostalCode>(string)</PostalCode>
  <SSN>(string)</SSN>
  <CampusList>
    <Campus>
      <CampusID>1</CampusID>
      <Descrip>(string)</Descrip>
    </Campus>
  </CampusList>
  <XmlExtensions>(string)</XmlExtensions>
</ExternalAuthorization>
```

The returned XML business entity (ExternalAuthorization) contains the 'AccessDenyType' enumerated field. If for any reason the web service request fails or is denied, this field will provide an indication as to the cause of the failure. The following values are possible:

Integration Web Service Deny Codes

```
public enum AccessDenyType
{
  NULL = 0,
```

```
  SUCCESS = 1,// Access Granted.  Success
  INVALIDGUID = 2,// Access Denied.  Invalid AuthGuid
  EXPIREDGUID = 4,// Access Denied.  Expired AuthGuid
  UNTRUSTEDSOURCE = 8,// Access Denied.  Untrused IPAddress
  USERNOTFOUND = 16// Access Failure.  User Not Found
}
```

Note: SOAP exceptions returned from an invocation request may indicate that the web server is either down or unavailable.

Enumerations

```
[Flags]
public enum RoleType
{
  NULL=0,
  STUDENT=1,
  STAFF=2,
  EMPLOYER=4,
  ADMIN=8,
  NONADMIN = STUDENT | STAFF | EMPLOYER,
  ALL = ADMIN | NONADMIN
}
```

```
[Flags]
public enum AccessDenyType
{
  NULL = 0,
  INVALIDGUID = 1,
  EXPIREDGUID = 2,
  UNTRUSTEDSOURCE = 4,
  USERNOTFOUND = 8,
  ACCESSDENIED = INVALIDGUID | EXPIREDGUID | UNTRUSTEDSOURCE | USERNOTFOUND
}
```

Business Entity Schemas

```

PCI Compliance

Portal version 19.0 and later supports credit card processing functionality based on the Payment Card Industry Data Security Standard (PCI DSS). A requirement for PCI compliance is that credit card information such as card number, expiration date, and CVV (Card Verification Value) is stored securely with a PCI compliant hosting provider and that the user interface of the application (i.e., Portal) does not capture credit card information. Payflow Pro (by PayPal) and ACI are the currently supported payment gateways for credit card payment processing in the Student Portal and Applicant Portal.

Note: Anthology Inc. products support only the "Funding Portal" product from ACI.

To enforce PCI compliant payment processing, the Portal was updated as follows:

- The 'Add a New Credit Card' option is centralized in Student Portal under My Finances > Payment Information. This option redirects the user to the payment page of the configured payment gateway provider (PayPal or ACI).

- The 'Add New Payment Method' button is no longer available under Student Portal > My Housing. However, users can make payments with existing credit cards.

- The Pay Now button in Applicant Portal redirects the user to the payment page of the configured payment gateway provider (PayPal or ACI).

- Credit card numbers are no longer stored in the CampusNexus Student database.

For more information, refer to the following documents available in http://www.-mycampusinsight.com/Pages/Default-2014.aspx > Document Center (logon required)

- CampusNexus Student PCI Compliance Guide

- Conversion Tool for existing Credit Cards

Azure Active Directory

If Portal is deployed in a cloud environment with Azure Active Directory (AAD), the Student STS and Staff STS are not used for the authentication of Portal users. When authentication is provided by the AAD, applicants, students, and staff will log in to Portal via the Microsoft Azure login page.

In an AAD environment, the "Change Password" page and the "Forgot Password" option are not available in Applicant Portal, Student Portal, and Faculty Portal. Portal users need to use the steps on the following website to access the self-service password reset:

https://docs.microsoft.com/en-us/azure/active-directory/active-directory-passwords-update-your-own-password

Portal Configuration Tool

If Portal is deployed in a cloud environment with Azure Active Directory (AAD), in the Portal Configuration tool, ensure that the **Change Password** option is **not** enabled in the Security Roles associated with the campus.

Clear the Add Menu and Quick Link check boxes for Change Password under Menu Transactions and Quick Links Manager to prevent the "Change Password" page (which is non-functional with AAD) from being displayed in Portal.
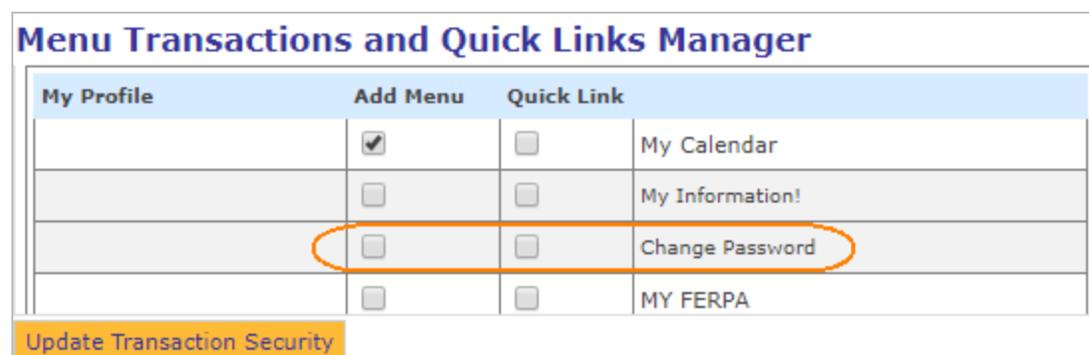

For more information about the Azure AD self service password reset, refer to the following website:

https://docs.microsoft.com/en-us/azure/active-directory/active-directory-passwords-getting-started

Portal Admin Console

When Portal is integrated with AAD, administrators cannot edit the information of Portal users in the Portal Admin Console.

The Edit option is not displayed for a Portal user account. The account can only be edited at the Azure AD website listed above.

AAD Authentication Configuration – List of Supported Attributes

The following attributes can be used with Azure Active Directory (AAD). Some of these attributes may have special restrictions, i.e., UserPrincipalName (UPN) attribute value.

User
Class

▲ Properties

🔧 AboutMe : string
🔧 City : string
🔧 CompanyName : string
🔧 Country : string
🔧 Department : string
🔧 DisplayName : string
🔧 GivenName : string
🔧 JobTitle : string
🔧 Mail : string
🔧 MailNickname : string
🔧 MobilePhone : string
🔧 MySite : string
🔧 OfficeLocation : string
🔧 OnPremisesImmutableId : string
🔧 OnPremisesSecurityIdentifier : string
🔧 PostalCode : string
🔧 PreferredLanguage : string
🔧 PreferredName : string
🔧 State : string
🔧 StreetAddress : string
🔧 Surname : string
🔧 UsageLocation : string
🔧 UserPrincipalName : string

Another way to determine available and populated attributes is to use **Microsoft Graph Explorer** as a particular user and run a query similar to find out which property is populated.

Query Example:

```
https://graph.microsoft.com/v1.0/users?$top=2&$select=displayName,userPrincipalName,
mail,extensionAttribute3,companyName,department&$filter=userPrincipalName eq 'User-
1000803921@xyz.edu'
```

Note: Extension attributes are case sensitive.

For example, if the extension attribute is defined as `<some numbers>_extensionAttribute3` and the SySiteSettings table stores `<some numbers>_extensionattribute3`, the student will not be matched correctly.

Migration of Crystal Reports to SSRS

The following Crystal reports used in Portal have been converted to SQL Server Reporting Services (SSRS) for compatibility with PaaS (Platform as a Service) in a cloud environment.

- Transcripts – Student & Enrollment based
- Student Schedules
- Registration Billing
- Subsidiary Statements
- Payment Receipts

Custom SSRS reports are not supported with Portal version 20.0.0.

Crystal Reports will continue to work same as on prior versions.

For details about the SSRS integration in Portal, see Installation Manager Help.

Support for Custom SSRS Reports

With version 20.0.1 and later, Portal supports custom SSRS reports.

When SSRS reports are enabled, custom reports can be used for all the reports in Portal. A prerequisite is that the custom reports are uploaded to the SSRS reports server under Custom > Portal folder. The custom report files must have the same names as the default report files.

When no custom reports are available, the default SSRS reports are used in Portal.

Student Active Directory User

An account for a Student Active Directory User must be configured in the Portal Admin Console when Portal is deployed in an Active Directory (AD) environment and the *CreateWebPortalAccountService* and *UpdateWebPortalAccountService* WCF services need to be executed with this user. For more details about these APIs, see the CampusNexus Student [Service Catalog](#) (login required).

When the workflow activity [CreatePortalAccount](#) is used to create/update Portal accounts, for example in the context of Forms Builder forms, the Student Active Directory User account is used as an impersonation account to call the WebPortalAccountService APIs. The Cmc.Integration.Webservice.Wcf and CMCSecurityService APIs have been modified to run the activity using the impersonation account configured in the Portal Admin Console.

Create a Student Active Directory User Account

1. Using Internet Explorer, log in to the **Portal Admin Console**.

2. Click the **Student Active Directory User** link in the Administration section.

The Student Active Directory User page is displayed.

3. Enter the **User Name** and **Password** of a Student Active Directory User. This login supports functionalities provided by APIs or workflows when creating a Portal user account in an AD-enabled environment.

   This user must be a Staff member in CampusNexus Student **and** must be an administrator with permissions to create or modify accounts within AD (under Users and Computers > User > Domain Admins).

4. Click **Save**. The credentials are saved in the Portal database.

Parameter Based Redirection

Portal version 21.2.0 and later provides a solution that prevents the security risk of parameter based redirection.

What is Parameter Based Redirection?

Portal uses forms authentication. This means, when a user navigates to a page that requires authentication, the user is redirected to the login.aspx page. The login page prompts the user for user name and password. These credentials are passed to the web server and validated against an SQL database. For an authenticated user, the web server returns an authentication ticket that is encoded into the URL in the "ReturnUrl" parameter.

The "ReturnUrl" parameter on the Student Portal login page can be modified and replaced with any destination web site. Upon visiting a modified URL, the browser will first be directed to the "Login.aspx" page served by the web server, and the user will be prompted for credentials. Upon successful login, the user will then be directed to the modified URL that was placed in the "ReturnUrl" parameter.

Example:

After logging in at the URL below, the user will be directed to google.com. The string "https%3a%2f%2fgoogle.com" can be modified to redirect the user to any destination.

https://studentsts-<domain>/Login.aspx?ReturnUrl=https%3a%2f%2fgoogle.com&wa-a=wsignin1.0&wtrealm=https%3a%2f%2fsisportal-<domain>%2fCMCPortal%2f&wct=2019-08-29T14%3a21%3a29Z&w-ctx=rm%3d0%26id%3dpassive%26ru%3dsecure%2fstudent%2fstuportal.aspx&AppType=Portal&Role=STUDENT

This represents a risk as a crafted URL such as the one above can be more enticing when used for phishing attempts because it is served from the <domain>. This may result in a high success rate directing legitimate users to a fake version of the <domain> site where code can be executed in the victim's browser or sensitive information can be harvested.

Whitelisting of URLs

To prevent the security vulnerability of parameter based redirection, "whitelisting" was added in the Security Token Services (STS) component so that users cannot be redirected when accessing the Portal due to phishing attempts. The URLs used by the STS are stored in the wpURL table and are whitelisted (trusted) by default. For a typical Portal deployment, nothing else needs to be done by Portal administrators.

If any additional URLs use the Student STS for authentication, the associated hostnames need to be added to wpURL table.

Example:

When Portal is used with Forms Builder, the Forms Builder URLs need to be added to the wpURL table. Since users can be redirected from the STS to Forms Builder, the Forms Builder URLs must also be in the wpURL table. Pre-

viously, the Forms Builder URLs were managed manually through the database. Now, users can modify the wpURL table through the Portal Admin Console.

Add Trusted URLs to the wpURL Table

1. Using Internet Explorer, log in to the **Portal Admin Console**.

2. Click the **Urls** link in the Settings and Environment section to edit Urls in the wpURL table. The Urls page is displayed.

3. In the **Sites** drop-down list, select your portal site name.

4. Click the **Edit** button. The URLs field is now editable.

5. In the URLs field, specify a semi-colon separated list of trusted **hostnames** (along with port numbers if applicable) for your site.

6. Click **Save**. The following message is displayed:

Url value was updated. Please note that this value is cached in Student STS and the new value may not be reflected until the cache is refreshed after the time specified in SysiteSettings > CacheExpirationInMinutes.

Whitelist URLs for External Application Integrations Using Student STS

With Portal version 21.2.0 , the changes made to product to handle the security vulnerability will affect other product or external integrations that use the Student STS.

We provided a way to add URLs to the whitelist using an appSetting in the CMCPortalSTS web.config file.

To add URLs to be whitelisted, specify semi colon separated URL values in this appSetting:

```
<add key="WhiteListedUrls" value="domain.com;abc.edu" />
```

Note: For Azure hosted environments, if the configuration is to be updated to whitelist additional URLs, please reach out to Anthology Inc. Cloud Services .

Appendix

Custom Classes for the Default Scheme

CSS Code	Rendered
/****************Custom classes for the default theme (Blue theme) ********************/	
| ```css
.login_link
{
    background-color: #174e80!important;
    color: #ffffff!important;
}
.login_link:hover, .login_link:focus
{
    background-color: #174e80!important;
    color: #ffffff!important;
}

Custom Classes, CSS, and JS Added in Version 21.3

A. New bootstrap panel in My Class Schedule:

```css
#classCalendalPanel .panel-title > a {
    color: #ffffff !important;
    text-decoration: none;
    background-color: #337ab7;
    font-size: 16px;
```
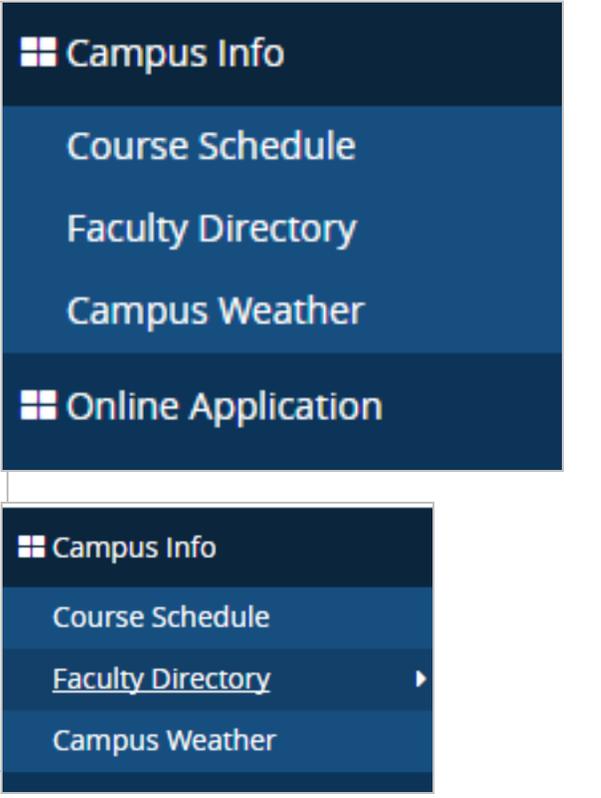

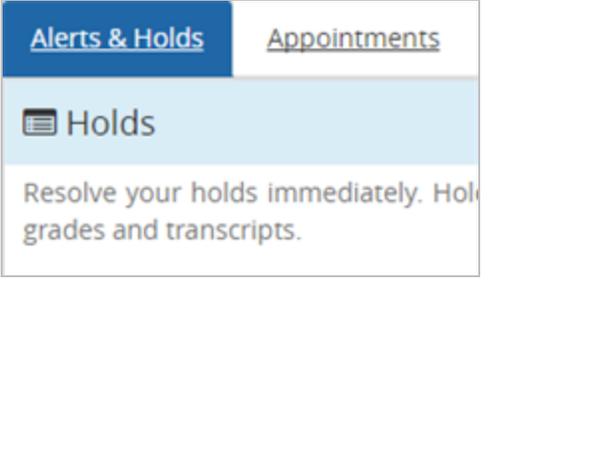

```
}

#classCalendalPanel .panel-heading a:before {
    font-family: 'Glyphicons Halflings';
    content: "\e114";
    float: right;
    transition: all 0.5s;
}

#classCalendalPanel .panel-title a[aria-expanded="true"]:before {
    -webkit-transform: rotate(180deg);
    -moz-transform: rotate(180deg);
    transform: rotate(180deg);
}
```

B. The Confirmation message was not visible in dark background. The text was changed to white.

```
.confirmMsg {
    color: #ffffff;
}
```

Confirmation Message
Your course has been successfully withdrawn!

Close Window
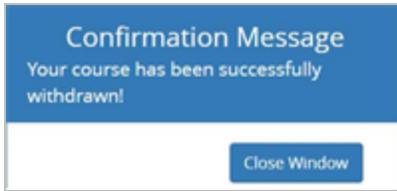

C. New CSS and JS files to implement full calendar in Student > My Academics > My Class Schedule. The calendar uses all standard defined classes of CSS files.

Public > global > css > schedulefullcalendar.css
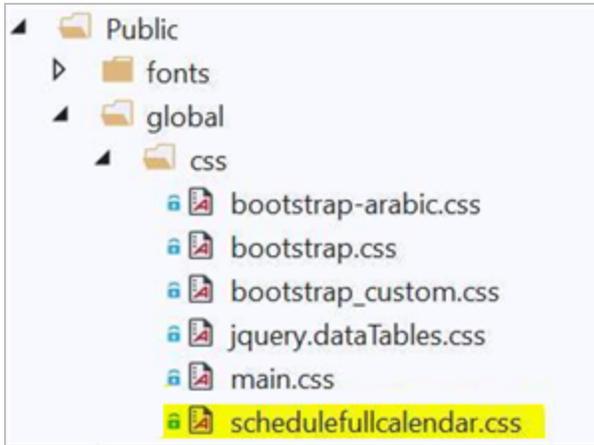

Scripts > schedulefullcalendar.js

Description_StudentPaymentSummary_1_327	Payment Summary for the Student.
Description_Swamisayyouwillfindajobtoday_1_64	Hello
Description_Test1_1_130	Test 2
Description_ThankYou_1_67	
Description_TransferCreditEvaluation_1_90	

Key	Description
Description_TransferCreditProcess_1_62	
Description_TransferCreditsDetail_1_162	Courses to transfer
Description_ViewAndPostAttendance_1_73	Here you post attendance for the date you selected, and view previously posted attendance details
Description_ViewAttendance_1_119	Select an enrollment and term to view your attendance
Description_ViewAttendance_1_120	
Description_ViewModifyJobs_1_46	Listed below are the jobs your organization has posted. If you would like to add a job please select the 'Add Job' link or the 'Edit' link if you wish to modify the details of a posted job. Currently, once a job has been added only University staff can delete a job posting and increase/decrease the number of openings for a job. Please select the 'Openings' link for any of the jobs listed below to perform either one of these functions.
Description_ViewPrintYour1098T_1_261	Use this page to view, then print your 1098-T IRS form(s). Click a 1098-T form below to view it.
Description_ViewyourHousingApplication_1_180	Please take a look below at the application you have on file for student housing.
Description_YourRequest_1_95	We are routing your request to the appropriate personnel. Someone will contact you shortly. Thank You.

Key	Description
StartText_1_62	All coursework completed at previously attended colleges and universities will be evaluated and posted to your @collegeName transcript as partof the admissions process. The evaluation will be done upon receipt of your complete transcript(s). The Admissions Office evaluates only official copies of transcripts after an application for admission has been received. Due to the large number of transfer students who apply for admission, we are not able to provide "on-the-spot" evaluations. a transfer course does not have a specific @collegeName equivalent, it will be posted on your academic record as an elective course. Your faculty advisor will be able to assist you with assigning thesecourses to your degree requirements and can, with the approval of the department chairman, recommend that an elective course be substituted for a specific required course. However, because of accreditation or departmental requirements, certain @collegeName departments restrict the number of electives that can be applied towards their degree programs. Departments with special regulations are identified in the course section of the Undergraduate Catalog. If you have obtained credits from a post-secondary institution which is not accredited by a regional accrediting body, the Admissions Office will not evaluate those credits. However, you can submit a request for consideration of these credits by the department which teaches similarcourses here at @collegeName. If approved by the academic department and the appropriate academic dean, those credits will beposted to your academic record. Again, this is something with which your faculty advisor can assist you. The information provided within this service must be used as a guide to how classes at your current or former school are transferred to @collegeName. A course appearing in the list is no guarantee that the course can be used in your major. A course not appearing in the list indicates that it has no prior history at @collegeName. Courses and schools will be added to the list on a regular basis. Any course completed over five years ago is not eligible to be transferred. Also, the fact that a class is listed from your current or former school is no guarantee that the school is currently offering the course or plans on offering the course in the future. All coursework completed at previously attended colleges and universities will be evaluated and posted to your @collegeName transcript as part of the admissions process.

Key	Description
StartText_1_62	All coursework completed at previously attended colleges and universities will be evaluated and posted to your @collegeName transcript as partof the admissions process. The evaluation will be done upon receipt of your complete transcript(s). The Admissions Office evaluates only official copies of transcripts after an application for admission has been received. Due to the large number of transfer students who apply for admission, we are not able to provide "on-the-spot" evaluations. a transfer course does not have a specific @collegeName equivalent, it will be posted on your academic record as an elective course. Your faculty advisor will be able to assist you with assigning thesecourses to your degree requirements and can, with the approval of the department chairman, recommend that an elective course be substituted for a specific required course. However, because of accreditation or departmental requirements, certain @collegeName departments restrict the number of electives that can be applied towards their degree programs. Departments with special regulations are identified in the course section of the Undergraduate Catalog. If you have obtained credits from a post-secondary institution which is not accredited by a regional accrediting body, the Admissions Office will not evaluate those credits. However, you can submit a request for consideration of these credits by the department which teaches similarcourses here at @collegeName. If approved by the academic department and the appropriate academic dean, those credits will beposted to your academic record. Again, this is something with which your faculty advisor can assist you. The information provided within this service must be used as a guide to how classes at your current or former school are transferred to @collegeName. A course appearing in the list is no guarantee that the course can be used in your major. A course not appearing in the list indicates that it has no prior history at @collegeName. Courses and schools will be added to the list on a regular basis. Any course completed over five years ago is not eligible to be transferred. Also, the fact that a class is listed from your current or former school is no guarantee that the school is currently offering the course or plans on offering the course in the future. All coursework completed at previously attended colleges and universities will be evaluated and posted to your @collegeName transcript as part of the admissions process.
